

# EPN real-time report

Wolfgang Söhne, Peter Neumaier

Federal Agency for Cartography and Geodesy

- **First commercial GNSS receiver on market supporting open standard SSR**
- **NovAtelFlex6 (OEM628 receiverboard)**
- **Allowing usage of open standard satellite orbit and clock corrections for RTCM SSR level 1 messages**
- **Usage of manufacturer's own corrections seems to be straightforward**
- **Usage of external IGS (or EUREF) corrections possible but bit more complicated**
- **Same type of receiver available at LGN Hannover**
- **First results showed some issues wr.t. the used correction stream**

■ Action Item no. 19 of 62<sup>th</sup> TWG (Budapest) was:

■ *“WS to distribute the presentation on real-time monitoring to CB and RP and to come up with proposals for a common monitoring of the three regional broadcasters.*

*Deadline: next TWG”*

■ Motivation:

- Currently, only the monitoring of the BKG broadcaster(s) is visible on EPN web pages
- Monitoring activities distributed over different organisations
- Basic measures of all three broadcasters should be visible at a glance

■ Action Item no. 7 of 63<sup>th</sup> TWG (Vienna) was:

■ *“investigate if it is possible to adapt the present real-time monitoring information in order to provide information specific for each EPN station (item 7)”*

■ Motivation:

- Currently, only the monitoring of the BKG broadcaster(s) is visible on EPN web pages
- Monitoring activities distributed over different organisations
- Basic measures of all three broadcasters should be visible at a glance

- **New feature introduced at <http://igs.bkg.bund.de> for monitoring of the EPN real-time streams**
- **Useful for users as well as station and caster providers**
- **Direct (external) link <http://igs.bkg.bund.de/ntrip/monitor/epnstreams> could be placed at EPN CB website**

# Welcome to the GNSS

providing

## GPS - GLONASS - Galileo

Ground observing stations equipped with GNSS tracking networks in cooperation with international projects referred to GNSS tracking networks by satellite data.	GNSS	Performance	Establish
	M-GEX	Performance	Establish
	Streams		

Check the availability of observations, recent behaviour of observations or analysis results. The GDC is structured by project using the project filter.	Maps	Have the selection
	Notices	

The NTRIP-section offers information and software about real-time GNSS observations and products.

Our **FTP-Access** allows quick download of files stored at GDC.

For some pages in the Data & Products section a help-button will be displayed in the menu bar to give further information on the handling of these pages.

A service of the **Federal Agency for Cartography and Geodesy**

- **New feature introduced at <http://igs.bkg.bund.de> for monitoring of the EPN real-time streams**
- **Useful for users as well as station and caster providers**
- **Direct (external) link <http://igs.bkg.bund.de/ntrip/monitor/epnstreams> could be placed at EPN CB website, or**
- **Modified feature could be developed at EPN CB and made available at the EPN CB webpage**

## What is used?

- Program „ntripclient“ to get the most recent source table (available mountpoints only)
- Comparison with (full) reference set of EPN stations (must be maintained)
- More sophisticated approach would need access to various files on the remote PC (where the caster is installed), e.g., how long a mountpoint is not available, etc.
