

ITRF2005 Densification

Summary

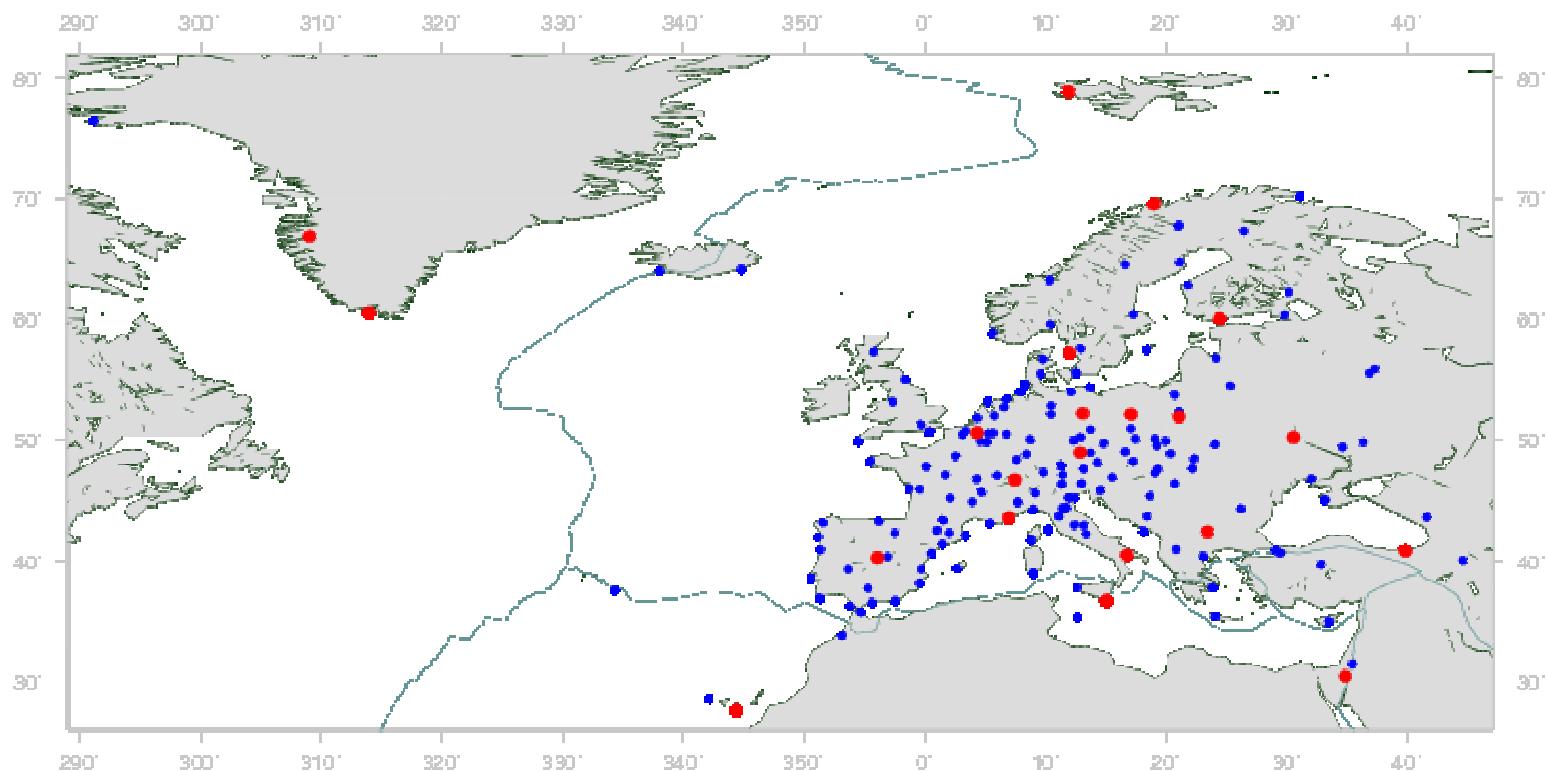

Comparison of Input and Methodology

- Input files:
 - EPN weekly from 860 to 1355
 - TSP: elimination of ± 40 weekly solutions
- Datum definition
 - ITRF2005 reference stations

ACC Datum Definition

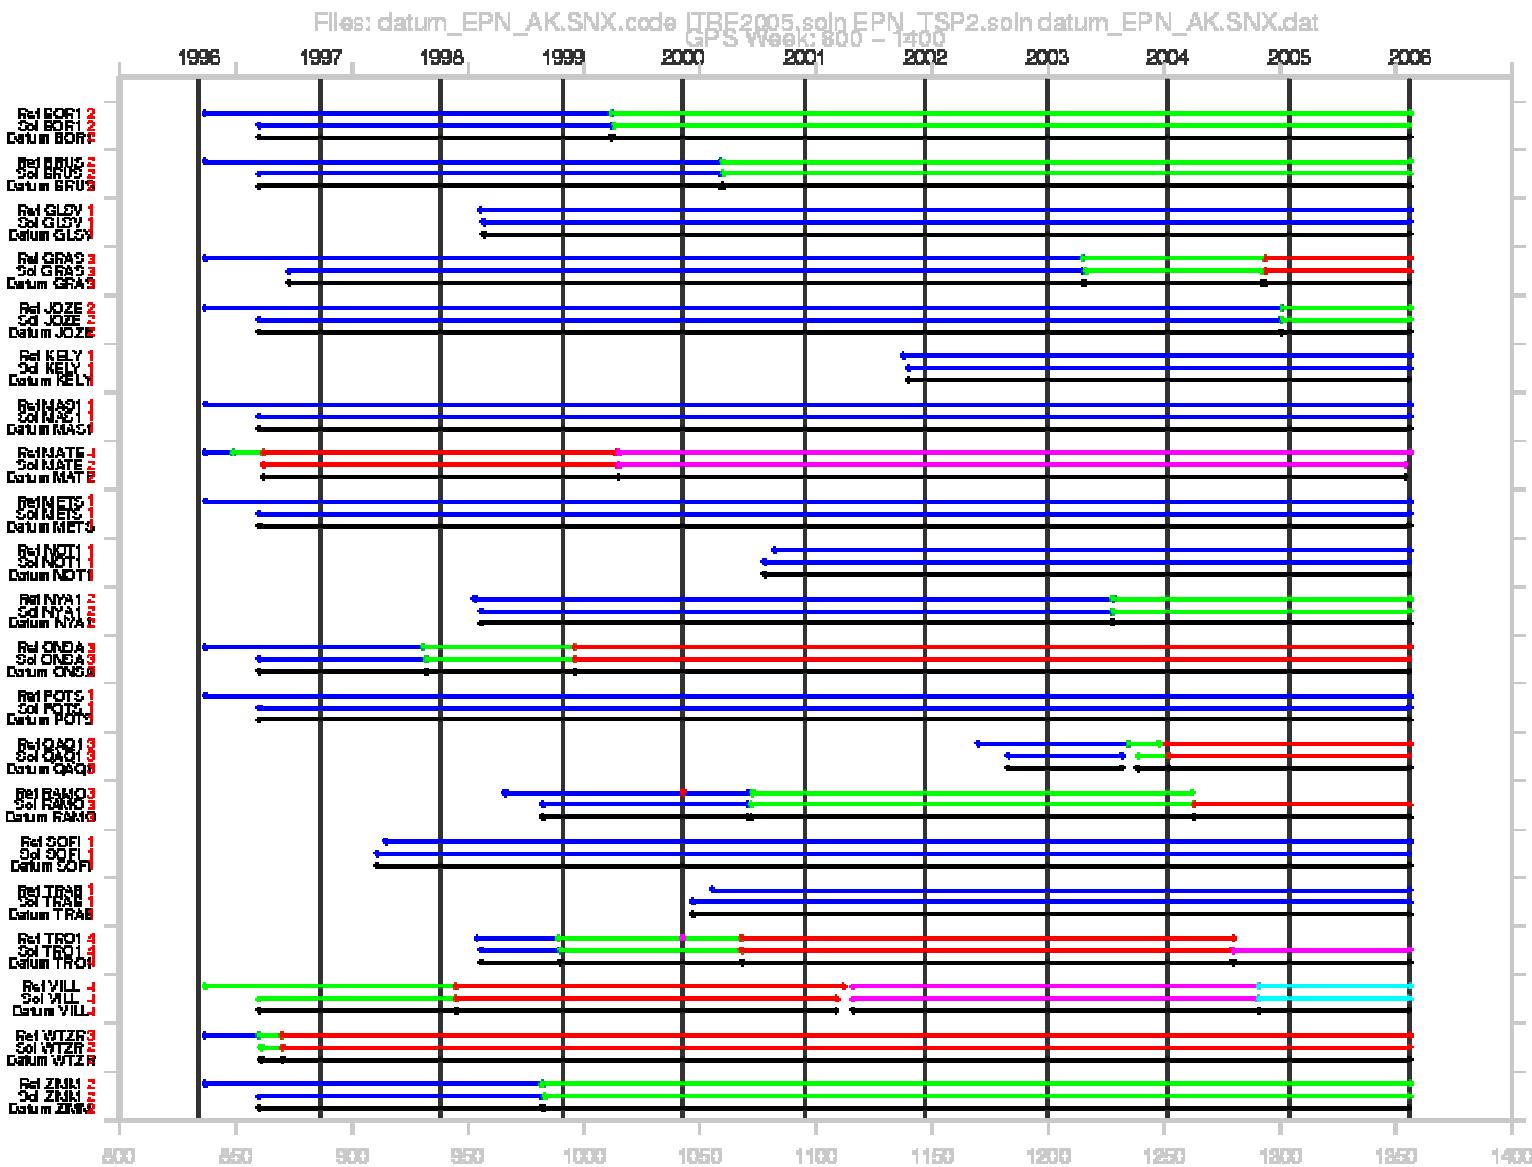

TSP Datum Definition

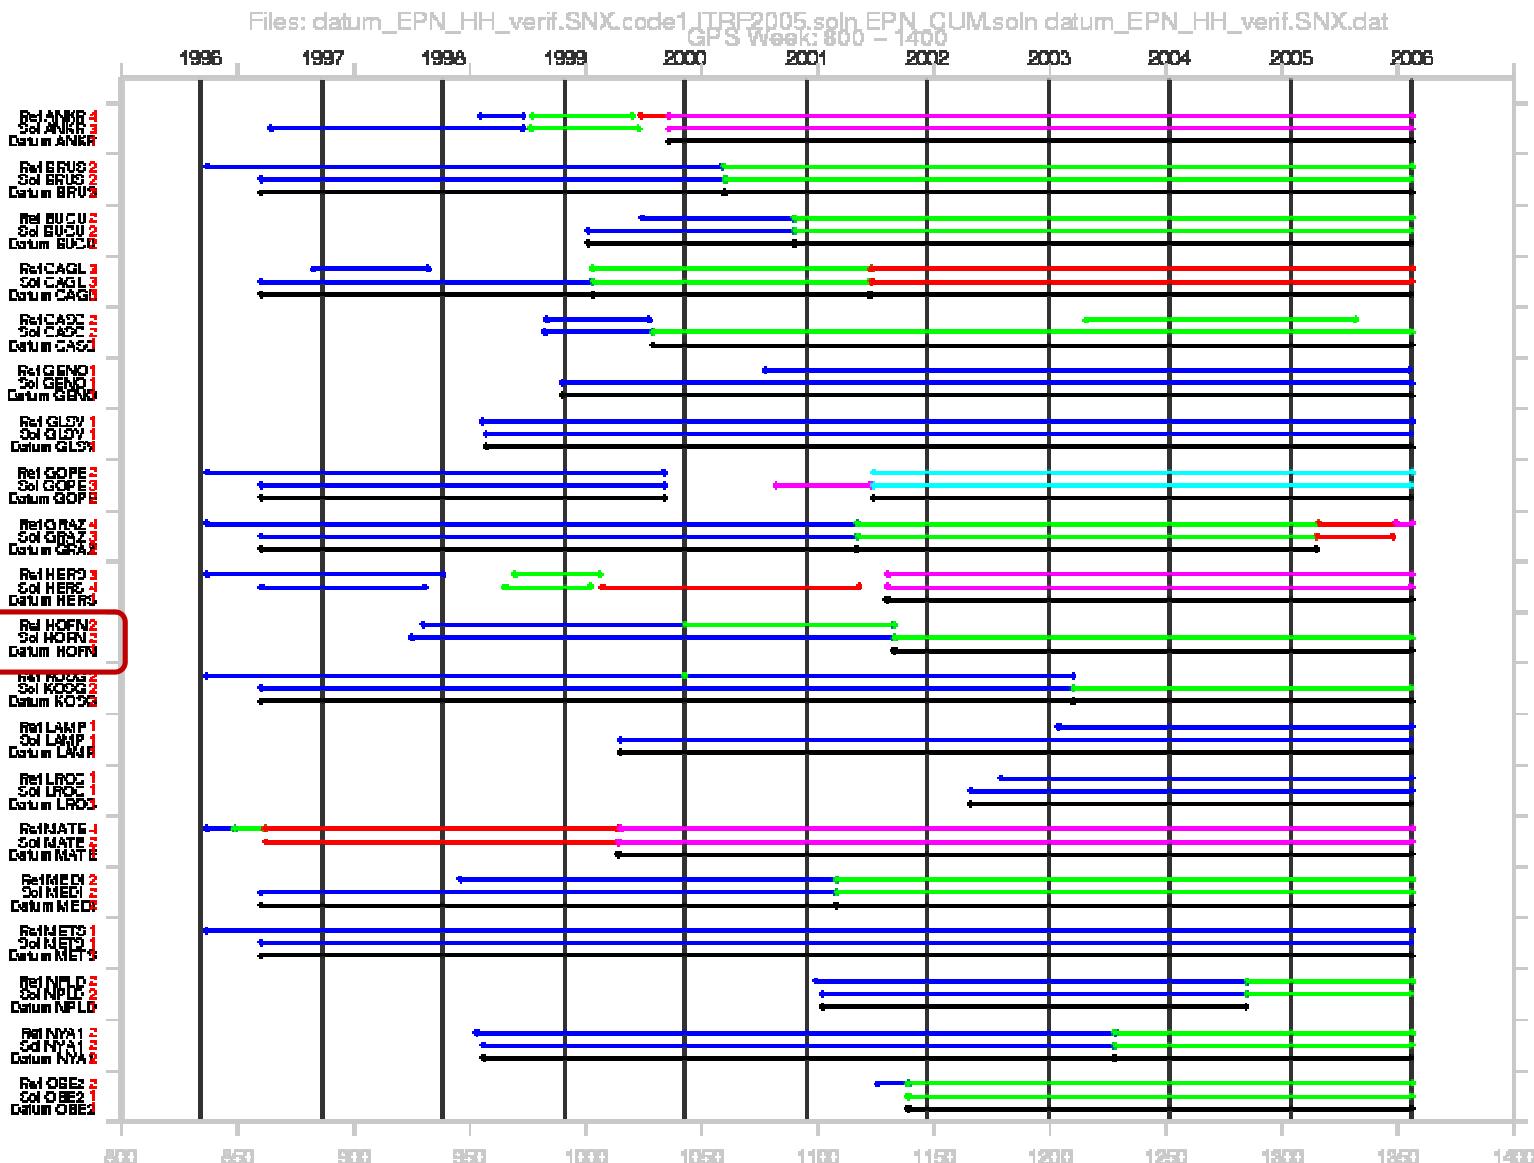

Comparison of Input and Methodology

- Input files:
 - EPN weekly from 860 to 1355
 - TSP: elimination of ± 40 weekly solutions

 - ITRF2005 reference stations
 - Solution numbers

Solution Numbers – TSP

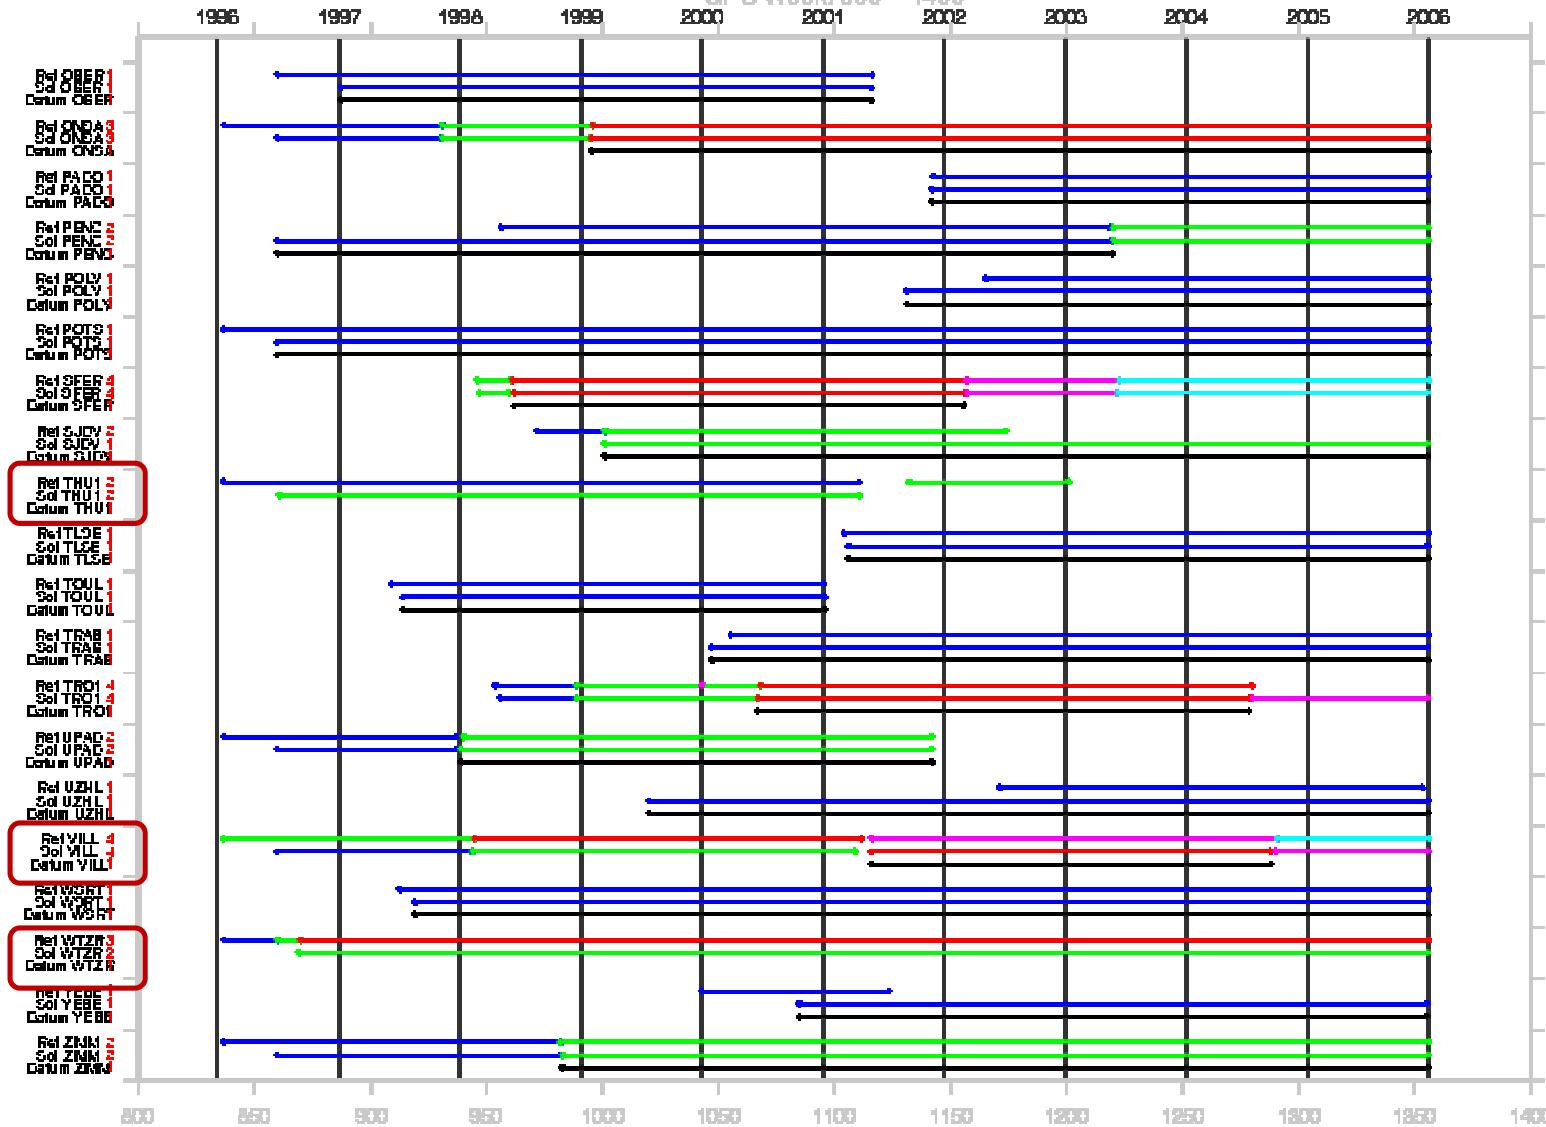

Solution Numbers – AAC (1)

Solution Numbers – AAC (2)

Files: datum_EPN_HH_verif.SNXcode2.ITRF2005.soln_EPN_CUMsoln.datum_EPN_HH_verif.SNX.dat

GPS Week: 800 – 1400

Comparison of Input and Methodology

- Input files:
 - EPN weekly from 860 to 1355
 - TSP: elimination of ± 40 weekly solutions
- Datum definition
 - ITRF2005 reference stations
 - Solution numbers
 - Method:
 - ACC: heavily constrained
 - TSP: minimal constrained, 7 parameters

Comparison of Results

- In ITRF2005 (= No Helmert) ?
 - Problem: correlation of transformation parameters

Summary of Conclusions

- ACC:
 - The AC and TSP solutions may be considered as equivalent.
 - Coordinate differences (ACC/TSP):
 - The RMS of 3.6 mm of the transformed coordinates represents the expected precision.
 - Velocity differences (ACC/TSP): ??
 - The heavily constraint AC solution is proposed as ITRF2005 densification, due to optimal alignment to ITRF2005.
- TSP:
 - Coordinate differences (ACC/TSP):
 - reflect the limit of our actual ability to realize the regional reference frame
 - coordinate rms values about 2 mm for the horizontal and 7 mm for the vertical components.
 - Velocity differences (ACC/TSP):
 - show systematic effect both in the horizontal and the vertical components, which is far above the acceptable level.
 - As we see the same pattern at the ITRF2005-AC and TSP-AC comparison most probably the AC velocity solution is biased.
