

EUREF working group on deformation models (Holger Steffen, Martin Lidberg)

Work progress since November 2012

- More GPS data sets added, number increased from 32 to 60
- Most peer-reviewed publications since early 90s included
 - Reanalysed BIFROST/SWEPOS will be included once available
 - Still missing: Germany (SAPOS)
 - Currently analysis of reports and conference proceedings
- Analysis of bugs in data, correction of coordinates (see figures on next slides)
- Started analysis of reference frame, Euler pole rotation etc.
 - Common problem: tables have missing data, wrong labelling, reference frame undefined
- Analysis of geodynamic situation in certain areas
- See talk at EGU session G6.2/GD1.6 **Geodynamics of Eurasia: The Contribution of the Geodetic Community to EPOS**, Friday, 12 Apr, 14:45

**Status
2012/11/09**

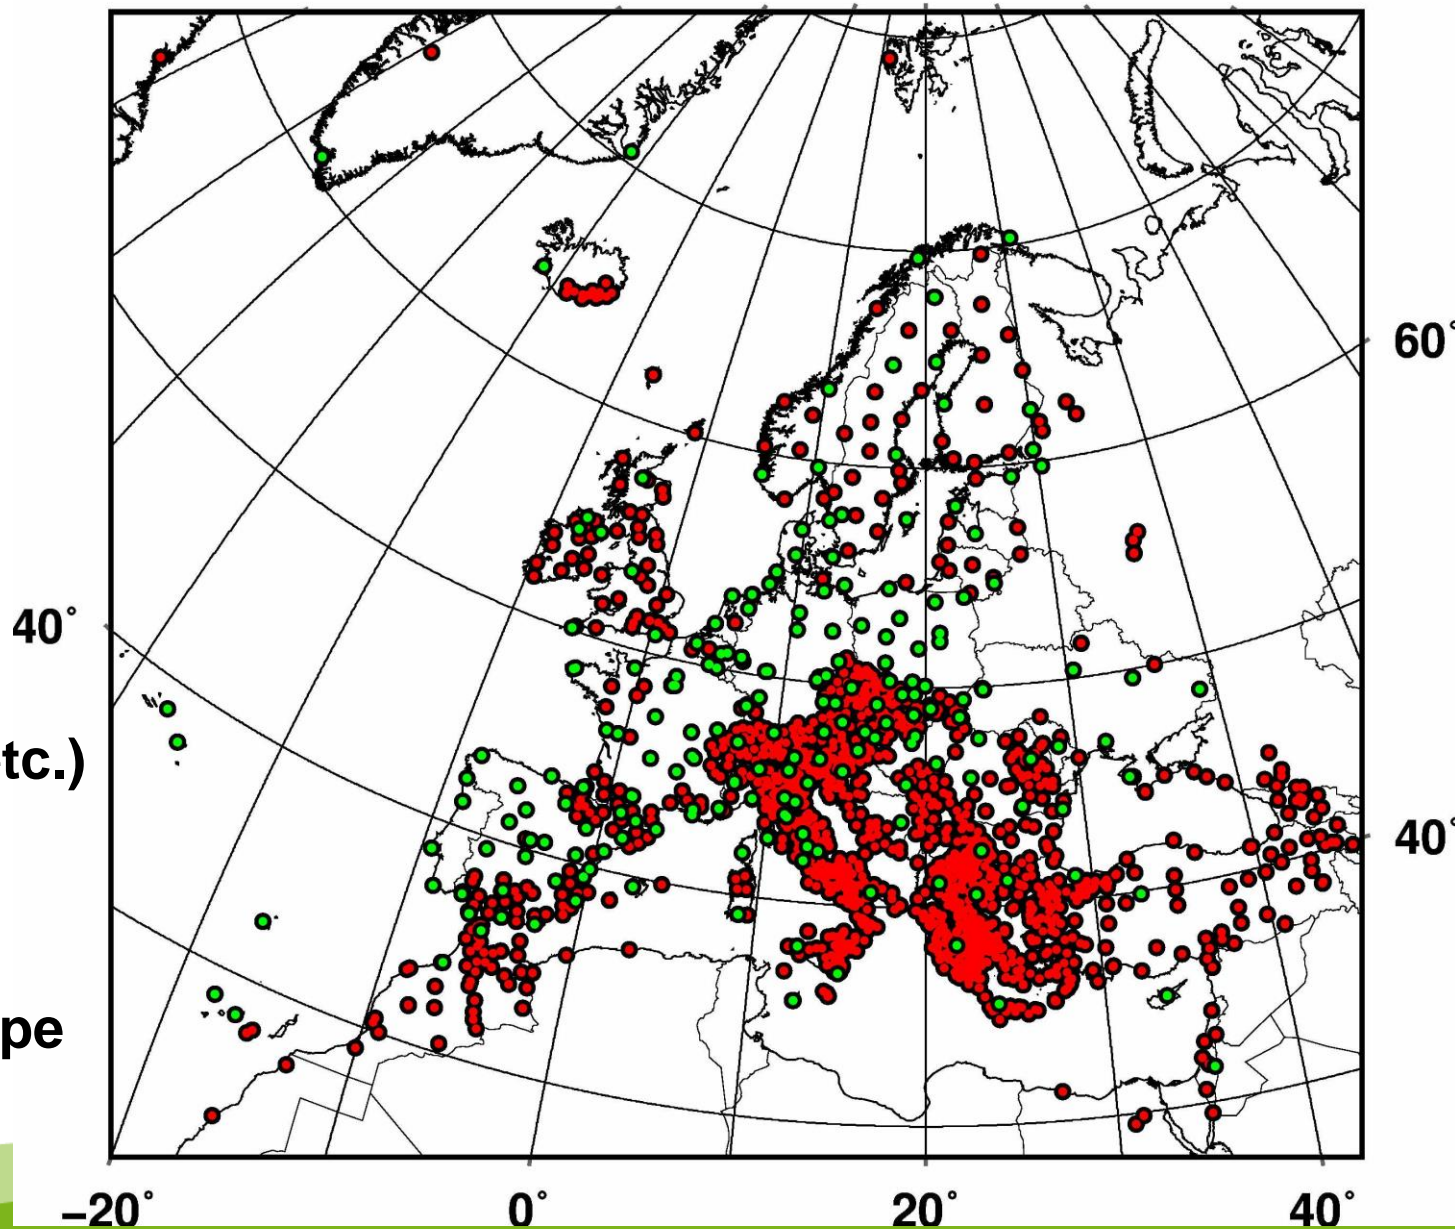

**32 GPS data
sets incl.
recent EPN
(green)**

Status
2013/03/20

**60 GPS data
sets incl.
recent EPN
(green)**

To be added:
Fennoscandia (SWEPOS etc.)
Germany (SAPOS)
France
May need:
North Africa, Eastern Europe

Status
2013/03/20

**60 GPS data
sets incl.
recent EPN
(gold)**

**Different reference
frames used**
