Part 1: GNSS activities swisstopo / EPN

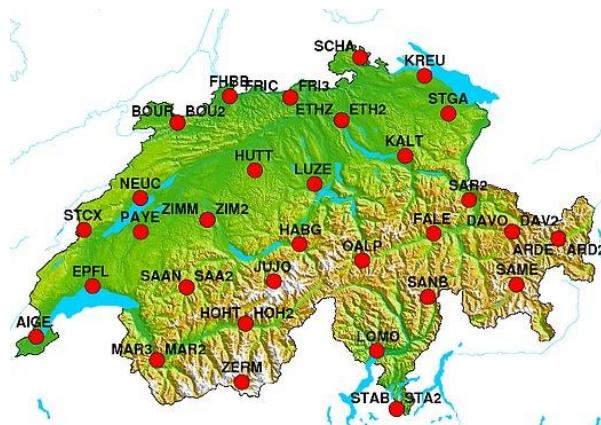

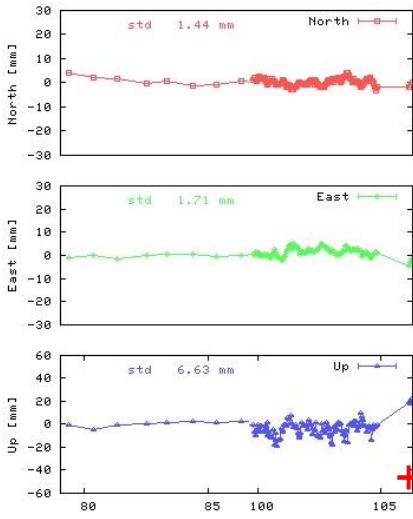

E. Brockmann

Multi-GNSS at Swiss permanent stations

- Feb-May 2015: **all 41 Swiss stations are enhanced from GPS/GLO receivers to Multi-GNSS** (+ 15 chokering antennas: causing jumps of ~ 2 cm despite individual antenna PCVs)

PAYE

ZIMJ
(Javad)

ZIM2

ZIM3

Data flow RINEX3 parallel to RINEX2

- Daily and hourly data flow RINEX3 since June 19, 2015 (after EUREF symposium)

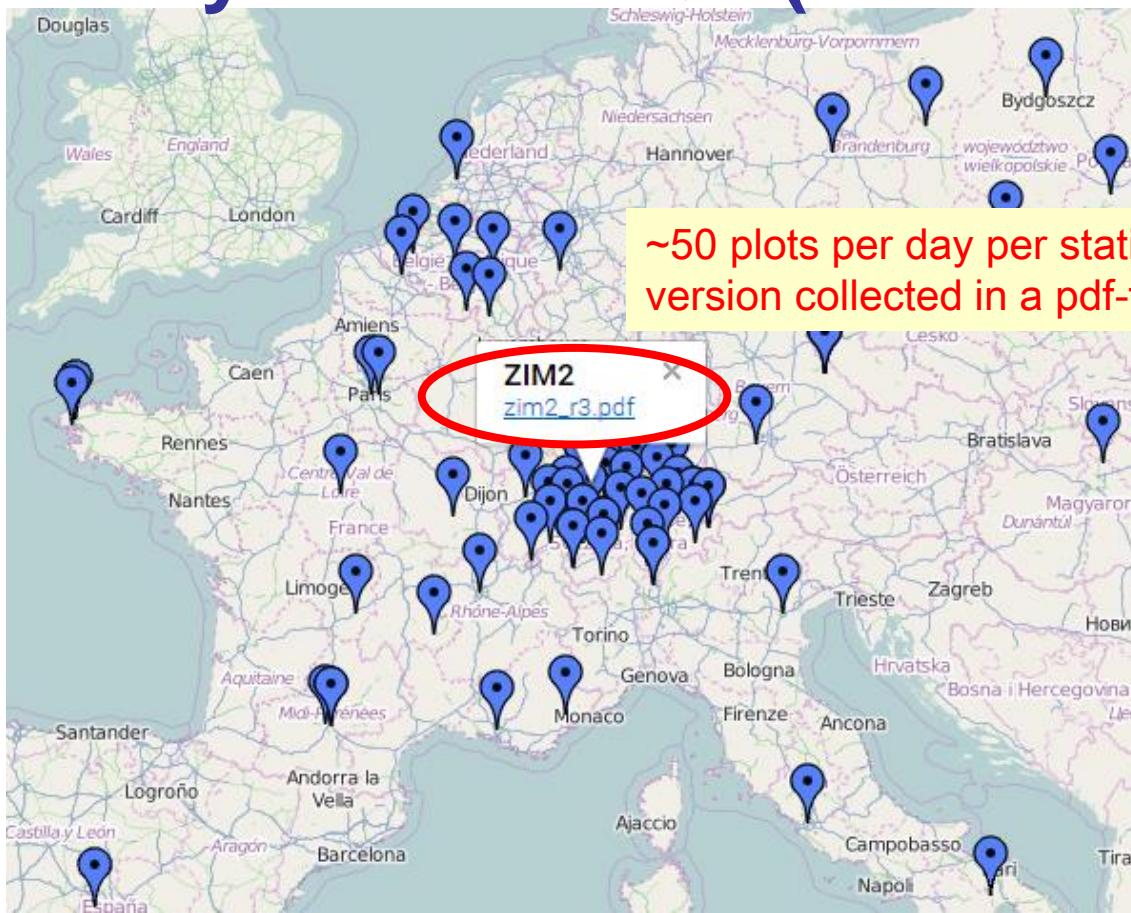

S/S	O/F	RINEX observation codes and their priority
***	***	*** *** *** *** *** *** *** *** *** *** *** *** *** *** *** ***

AUTN 10080M001	LEICA GR25	3.11	TRM57971.00	NONE	3.02 30	2880	30	24	6	8 autn r3.pdf

http://www.swisstopo.admin.ch/swisstopo/geodesy/pnac/html/en/anubis_monitor_r3.html

Preparing for G-Nut/Anubis 1.4

⌚ Progress in development of new/enhanced functionalities

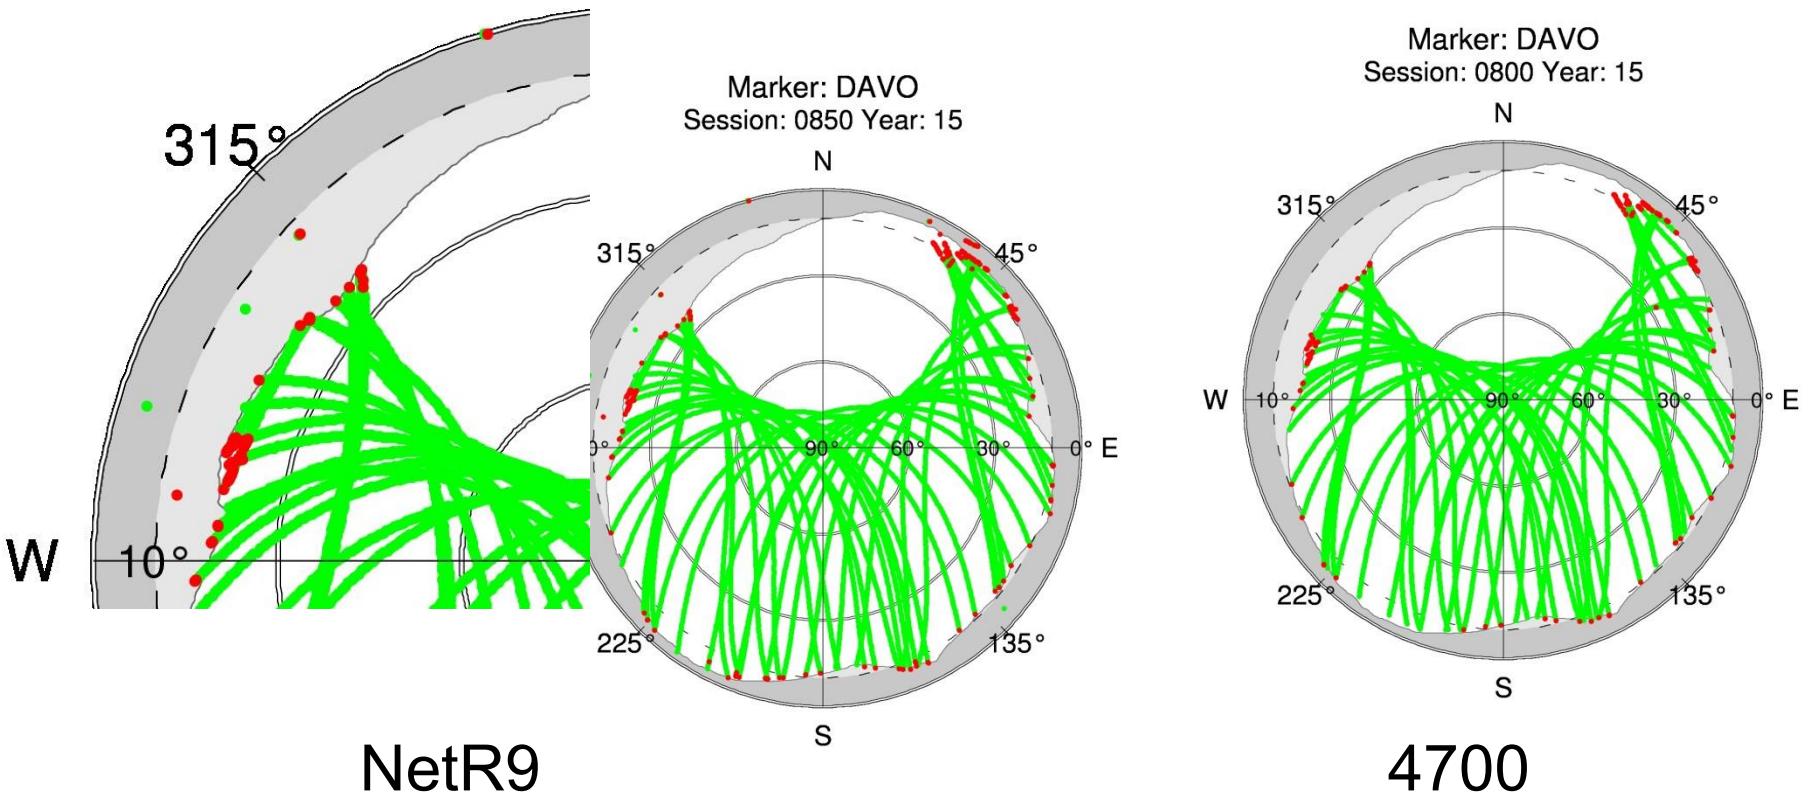

- Added signal-to-noise ratio monitoring
- Added support for SP3-format to facilitate a full QC
- New output – a high-resolution satellite information in external file
 - receiver/satellite coordinates, elevations, azimuths at a pre-defined sampling rate
- QC & positioning in static and kinematic mode
- Support for RINEX 3.03
- Windows-compatible version (support pre-compiled binaries)
- Several minor bugs/functionalities fixed according to user feedbacks

⌚ Time unavailability to complete/check the new release

Examples

- Davos (GPS observations behind mountains for Multi-GNSS receiver)

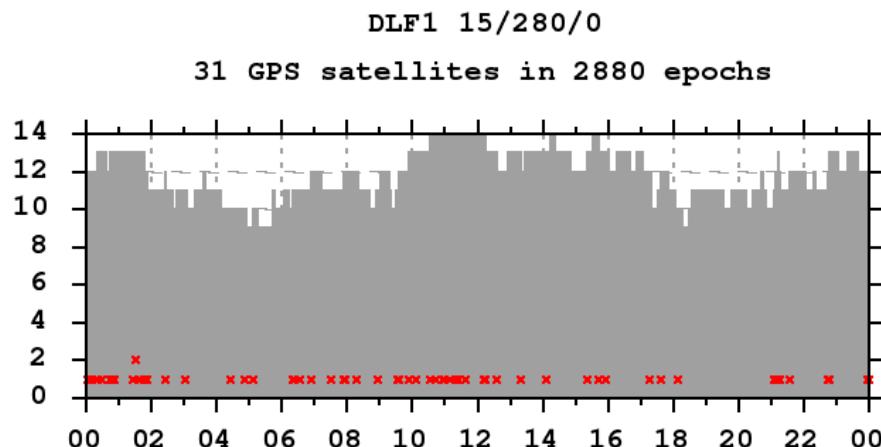

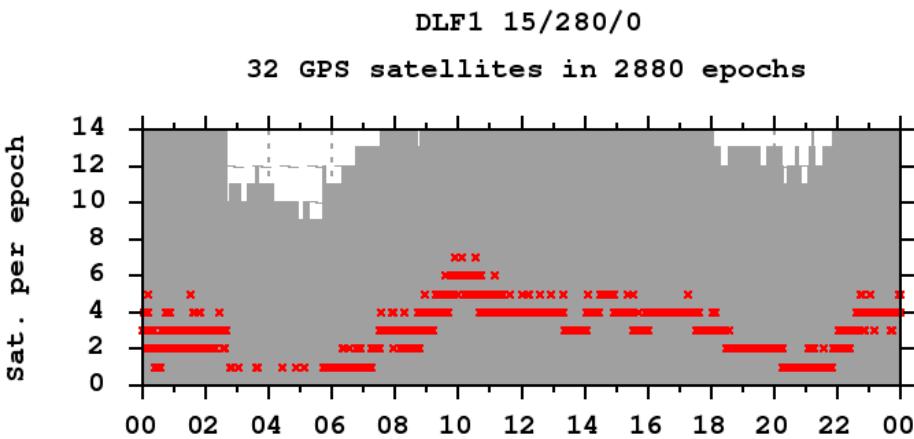

Examples: DLF1

Multi-GNSS receiver NetR9 (+ Leica antenna)

Lots of observations are below -5 degrees
- partly -58 degrees...:

Rinex 2
via teqc (Mar23,2013 – not dealing 4.85->4.93 version changes in T02 files) ->

Rinex 3
from receiver

16.12.2015

First RINEX3 campaign data

- 7 stations Leica GS14 (Multi-GNSS) in Turtmann network
- 2 weeks of measurements (bachelor thesis)
- First successful analysis of RINEX3 using BSW52
 - Using bnc for RINEX3 -> RINEX2
 - Using RNXSMT
- Commercial software LGO comparison successfull

Difference LGO – BSW52		
	ΔE [mm]	ΔN [mm]
	Δh [mm]	
	0.20	0.96
	0.68	0.95
	0.04	1.04
	0.08	0.25
	0.71	2.08
	0.58	0.69
	-0.26	0.93
	-0.24	0.88
Mean	0.22	0.97
std	0.39	0.51
		4.77

Campaign data analysis: Experiences R3->R2 conversion

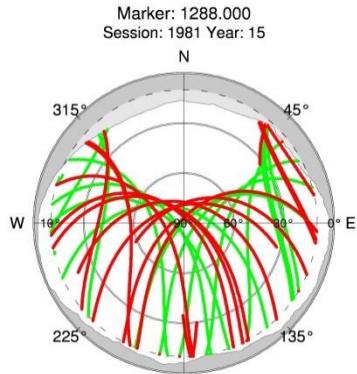

- GPS obs Rinex 3 L2: L2S || L2W

e.g. G01

G	12	C1C	L1C	D1C	S1C	C2S	L2S	D2S	S2S	C2W	L2W	D2W	S2W	SYS / # / OBS TYPES	
R	8	C1C	L1C	D1C	S1C	C2P	L2P	D2P	S2P					SYS / # / OBS TYPES	
E	16	C1C	L1C	D1C	S1C	C5Q	L5Q	D5Q	S5Q	C7Q	L7Q	D7Q	S7Q	C8Q	SYS / # / OBS TYPES

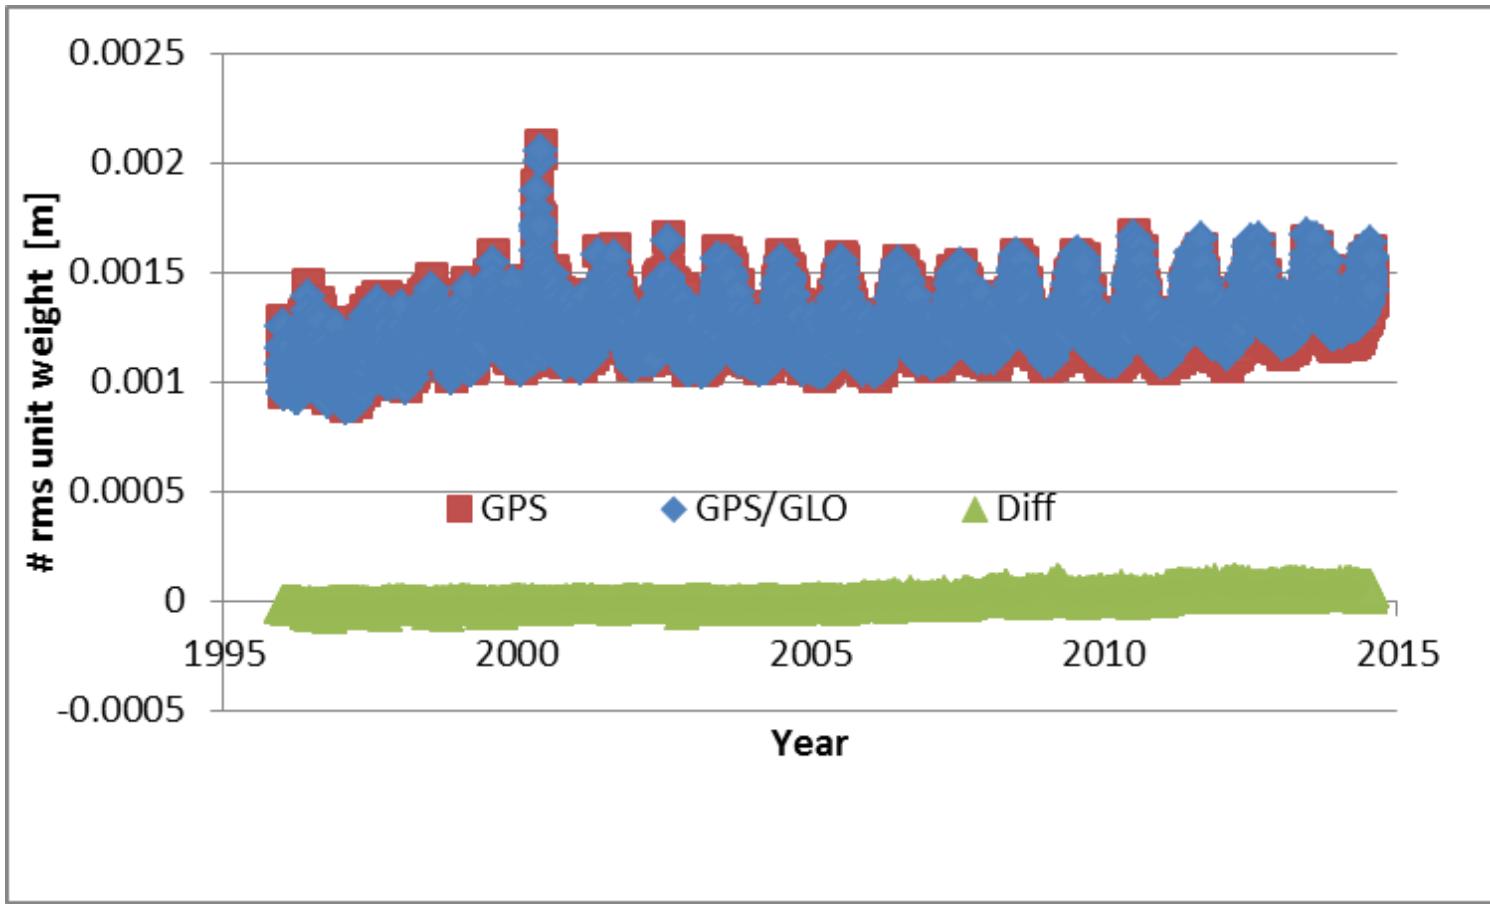

e.g. G04

- After bnc R3->R2: only one of L2S or L2W is picked up – half of the GPS constellation lost....

Impact of rms of unit weight (daily)

GPS/GLO rms of unit weight ~ 6% higher than GPS-only rms
(in 2015) ; + Multi-GNSS discrepancy even higher (see LAC WS)

Conclusion

- Analysis Multi-GNSS possible and very good progress in
 - data availability, data monitoring, RINEX3 handling tools
- But,
 - Procedures need to be impleted to operational
 - Careful look in results help to detect lots of tiny little details
- Lots of questions to answer:
 - Which observations to use (e.g. L2S, L2W, L2X – all results in different coordinates);
 - AC-Software ...
- Todo
 - Continue and further develop QC acitivity
 - Foresee a EPN test data analysis campaign (in 2016) to answer important analysis questions (observation selection; schedule to include GAL in EPN oerational processing)

Part 2: Update on time scales biases and compatibility between SP3 and broadcast ephemeris

A. Caporali

Part 3: RINEX v3 long file names in EPN RDCs

G. Stangl
