

**G. Milev, M. Minchev. G. Valev, M. Matova, K. Vassileva, P. Gabenski**

## **EUROPEAN REFERENCE FRAME IN BULGARIA**

**Monograph**

**Edited by  
Prof. Dr. Eng. Georgi Milev**

**Sofia 2005**

## **European Reference Frame in Bulgaria**

### **Contents**

#### **Foreword**

- 1. General**
- 2. Geological and seismotectonic conditions in Bulgaria**
- 3. Establishment of the EUREF network in Bulgaria**
- 4. European height system**
- 5. European Combined Geodetic Network**
- 6. EUREF applications in Bulgaria**
- 7. General remarks on the EUREF related activities in Bulgaria and the neighboring countries**
- 8. Conclusions and suggestions**

#### **Abbreviations**

#### **References**

#### **Summary in English**

## **European Reference Frame in Bulgaria**

### **Contents**

#### **Foreword**

#### **1. General**

##### **1.1. International and European Reference Frames – definition, importance and use**

###### **1.1.1. International Terrestrial Reference Frame**

###### **1.1.2. European Reference Frame**

###### **1.1.2.1. Fundamentals**

###### **1.1.2.2. EUREF Permanent Network**

##### **1.1.3. EUREF and development of GNSS**

###### **1.1.3.1. General**

###### **1.1.3.2. Global Navigation Satellite Systems**

#### **1.2. Introduction and application of EUREF in Bulgaria**

- 2. Geological and seismotectonic conditions in Bulgaria**
  - 2.1. Tectonic conditions in the Balkan Peninsula and Bulgaria**
  - 2.2. Seismotectonic overview**
  - 2.3. Recent Earth crust geodynamic processes**
  - 2.4. Technogenically provoked seismicity**
  - 2.5. Recommendations for reducing the technogenic seismicity**
  - 2.6. Short summary of the seismic conditions in Bulgaria**

### **3. Establishment of the EUREF network in Bulgaria**

#### **3.1. General**

#### **1.2. Integration of Bulgaria in the EUREF GPS network**

##### **3.2.1. Network design**

##### **3.2.2. Station location and monumentation**

##### **3.2.3. GPS campaigns**

##### **3.2.4. Data processing. Adopting of results**

###### **3.2.4.1. Planning and implementation**

###### **3.2.4.2. Datum**

###### **3.2.4.3. Data processing and adopting of results**

##### **3.2.5. BULREF network**

#### **3.3. Sofia mobile laser station**

#### **3.4. Establishment of Sofia GPS permanent station**

#### **3.5. Conclusion**

## **4. European height system**

### **4.1. General**

### **4.2. Establishment of the European Vertical Network EUVN**

#### **4.2.1. EUVN'97 GPS campaign preparation and realization**

#### **4.2.2. GPS data processing and results**

#### **4.2.3. Concluding remarks and assessment**

### **4.3. Integration of the Bulgarian levelling network in the Unified European Levelling Network**

#### **4.3.1. Unified European Levelling Network. General principles**

#### **4.3.2. Bulgarian first order levelling network data**

#### **4.3.3. Connecting the Bulgarian levelling network with the Unified European Levelling Network**

## **5. European Combined Geodetic Network**

### **5.1. General principles**

### **5.2. Participation of Bulgaria**

#### **5.2.1. General**

#### **5.2.2. Selection of ECGN site locations in Bulgaria. Realisation**

## **6. EUREF applications in Bulgaria**

### **6.1. Main aspects**

**6.1.1. Comparative analysis of the new national geodetic networks in the European countries**

**6.1.2. National GPS network**

### **6.2. Establishment of the National GPS network**

### **6.3. Realization of DGNSS**

### **6.4. Selection of adequate reference system of Bulgaria**

**6.4.1. Principles and definitions**

**6.4.2. Criteria for national reference system definition**

**6.4.3. International and European aspects of the problem**

**6.4.4. Reference systems in Bulgaria**

**6.4.5. Bulgarian Geodetic System 2000**

**6.4.6. Height system**

**6.4.7. Selection of adequate geodetic projection for Bulgaria**

**6.4.8. Map grid and nomenclature**

## **6.4.9. Transformations**

### **6.4.9.1. General**

### **6.4.9.2. Transformation between two three-dimensional systems**

### **6.4.9.3. Transformation between geocentric ( $X, Y, Z$ ) and topocentric ( $x, y, z$ ) systems**

### **6.4.9.4. Transformation between two topocentric systems**

### **6.4.9.5. Transformation between Cartesian coordinates ( $X, Y, Z$ ) and ellipsoid geographic coordinates ( $\phi, \lambda, h$ )**

### **6.4.9.6. Transformation between ellipsoid and projection coordinates**

### **6.4.9.7. Transformation between two height systems**

## **6.4.10. Practical steps for introduction of BGS2000 and its role for efficient application of the modern technologies**

### **6.4.10.1. Act No 140 of the Council of Ministers**

### **6.4.10.2. Instructions for applying the Act and introducing BGS2000 (project). Brief description**

### **6.4.10.3. BGS2000 and its role for efficient application of modern technologies**

## **6.5. EUREF and related activities in geodesy, cartography, photogrammetry and cadastre**

### **6.5.1. General conclusions on geodesy**

### **6.5.2. Applications in cartography**

### **6.5.3. Applications in photogrammetry**

### **6.5.4. Applications in cadastre**

#### **6.5.4.1. General**

#### **6.5.4.2. Which coordinate system is relevant for cadastre?**

#### **6.5.4.3. Advantages and problems related to EUREF**

## **6.6. Geodynamic investigations related to the introduction and application of EUREF in Bulgaria and other geodynamic projects in the region**

### **6.6.1. WEGENER-MEDLAS**

## **6.6.2. CERGOP**

### **6.6.2.1. Project essence and CERGOP 1**

### **6.6.2.2. Establishment of CEGRN network and data processing**

### **6.6.2.3. Introducing the project in Bulgaria**

## **6.6.3. CERGOP 2**

### **6.6.3.1. General**

### **6.6.3.2. CEGRN extension and data processing**

### **6.6.3.3. Participation of Bulgaria**

## **6.6.4. Chirpan GPS network**

## **6.6.5. Krupnik-Kresna geodynamic network**

### **6.6.5.1. General**

### **6.6.5.2. GPS data processing**

## **7. General remarks on the EUREF related activities in Bulgaria and the neighboring countries**

### **7.1. General**

### **7.2. National geodetic network**

### **7.3. Demarcation of the Bulgarian border**

### **7.4. Land reform**

### **7.5. Problems of engineering geodesy**

### **7.6. GPS measurements for EUREF integration of Romania, Macedonia and Albania**

### **7.7. Sofia EUREF symposium in 1997**

## **8. Conclusive remarks**

### **8.1. General issues**

### **8.2. Conclusion**

**Abbreviations**

**References**

**Summary in English**
