

# Account of the EPN Special Project „Troposphere Parameter Estimation“

*Wolfgang Söhne*

*EPN Troposphere Coordinator*

*Presented by Heinz Habrich*

**Bundesamt für Kartographie und Geodäsie  
Frankfurt am Main, Germany**

## Outline

- Changes in analysis software (Bernese 4.2 → 5.0) and effect on Zenith Total Delay (ZTD) parameters
- Example for “sensitivity” of ZTD parameters
- Comparison EPN combination vs. IGS troposphere products
- Conclusions

# Note

- The following 2 slides show the development of the Troposphere SP.
- Between weeks 1317 up to 1325 there changed 7 LACs from Bernese version 4.2 to 5.0.
  - Together with the version no. the troposphere model was changed too.
  - V 4.2: „Dry Niell“ mapping function, no a-priori model
  - V5.0: „Dry Niell“ a-priori model and estimation of „Wet Niell“ parameters.

## Chronology of the project:

- GPS week 1108: first solutions
- GPS week 1110: Contribution of 4 LACs: ASI, BKG, COE, UPA
- GPS week 1111: Contribution of IGN and LPT
- GPS week 1112: Contribution of OLG
- GPS week 1113: Contribution of WUT
- GPS week 1114: Contribution of NKG
- GPS week 1115: Contribution of GOP
- GPS week 1120: Contribution of BEK
- GPS week 1126: Contribution of IGE
- GPS week 1130: New EUREF processing options  
Contribution of DEO and ROB
- GPS week 1143: Switch to new reference frame ITRF 2000  
Contribution of SGO
- GPS week 1143: COE using Wet Niell, switching to (unofficial) 5.0
- GPS week 1185: Contribution of SUT as 16<sup>th</sup> LAC

### Chronology of the project (cont'd):

- GPS week 1203: Contribution of EPN troposphere solution to IGS combination of ZTD
- GPS week 1307: GFZ stops EPN combination (IGS troposphere combination is changing from GFZ to JPL)
  - **GPS week 1317: LPT switching to 5.0, Wet Niell (EUREF mail 2360)**
  - **GPS week 1318: WUT switching to 5.0, Wet Niell (EUREF mail 2363)**
  - **GPS week 1319: BKG switching to 5.0, Wet Niell (EPN LAC mail 490)**
  - **GPS week 1320: GOP switching to 5.0, Wet Niell (EPN LAC mail 508)**
  - **GPS week 1321: NKG switching to 5.0, Wet Niell (EPN LAC mail 505)**
  - **GPS week 1324: UPA switching to 5.0, Wet Niell**
  - **GPS week 1325: ROB switching to 5.0, Wet Niell**
- GPS week 1335: New interpolation procedure for ASI solution (EPN rapid troposphere combination only)
- GPS week 1346: “Small” outliers rejection improved
- GPS week 1364: IGE switching to 5.0, Wet Niell (EPN LAC mail 623)

## Overview

### Before GPS week 1317

ASI: Microcosm  
BEK: Bernese 4.2  
BKG: Bernese 4.2  
COE: Bernese 5.0  
DEO: Gipsy  
GOP: Bernese 4.2  
IGE: Bernese 4.2  
IGN: Bernese 4.2  
LPT: Bernese 4.2  
NKG: Bernese 4.2  
OLG: Bernese 4.2  
ROB: Bernese 4.2  
SGO: Bernese 4.2  
SUT: Bernese 4.2  
UPA: Bernese 4.2  
WUT: Bernese 4.2

### After GPS week 1325

ASI: Microcosm  
BEK: Bernese 4.2  
BKG: Bernese 5.0  
COE: Bernese 5.1  
DEO: Gipsy  
GOP: Bernese 5.0  
IGE: Bernese 4.2 (5.0)  
IGN: Bernese 4.2  
LPT: Bernese 5.0  
NKG: Bernese 5.0  
OLG: Bernese 4.2  
ROB: Bernese 5.0  
SGO: Bernese 4.2  
SUT: Bernese 4.2  
UPA: Bernese 5.0  
WUT: Bernese 5.0

# Note

- The following study has the focus on the model changes (after new software version) and its impact on the ZTD parameters.
- For this purpose ZTD results of 2 LACs have been compared each time.

### **Study:**

- Comparison of 2 LACs with same resp. different Bernese software versions.
- Looking only on the impact to the ZTD parameters.
- Period of investigation are weeks 1287 – 1350
- Computation of mean values for weeks 1287-1316 (mostly old model) and weeks 1325-1350 (mostly new model)

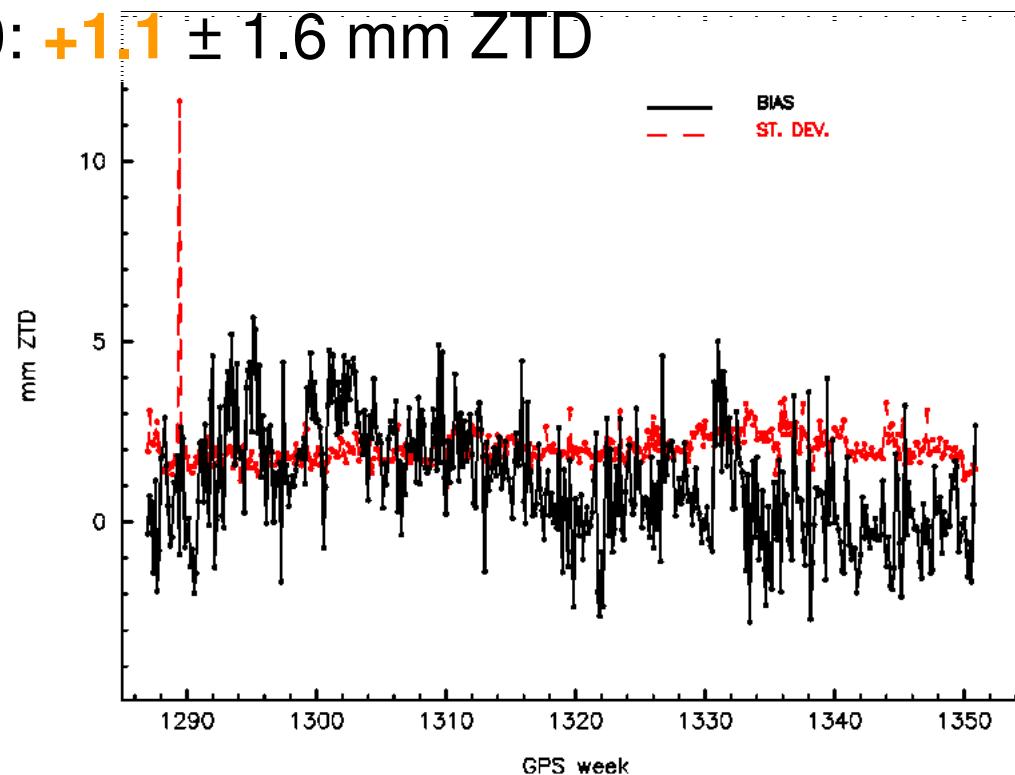

## Daily mean bias and standard deviation

BEK vs. IGE: Same software version, all the time, ~ 19 common stations

1287-1316: **+1.9**  $\pm$  1.5 mm ZTD (v 4.2/4.2)

1325-1350: **+0.3**  $\pm$  1.4 mm ZTD (v 4.2/4.2)

1287-1350: **+1.1**  $\pm$  1.6 mm ZTD

Reference for the case of „no change“: Stable bias

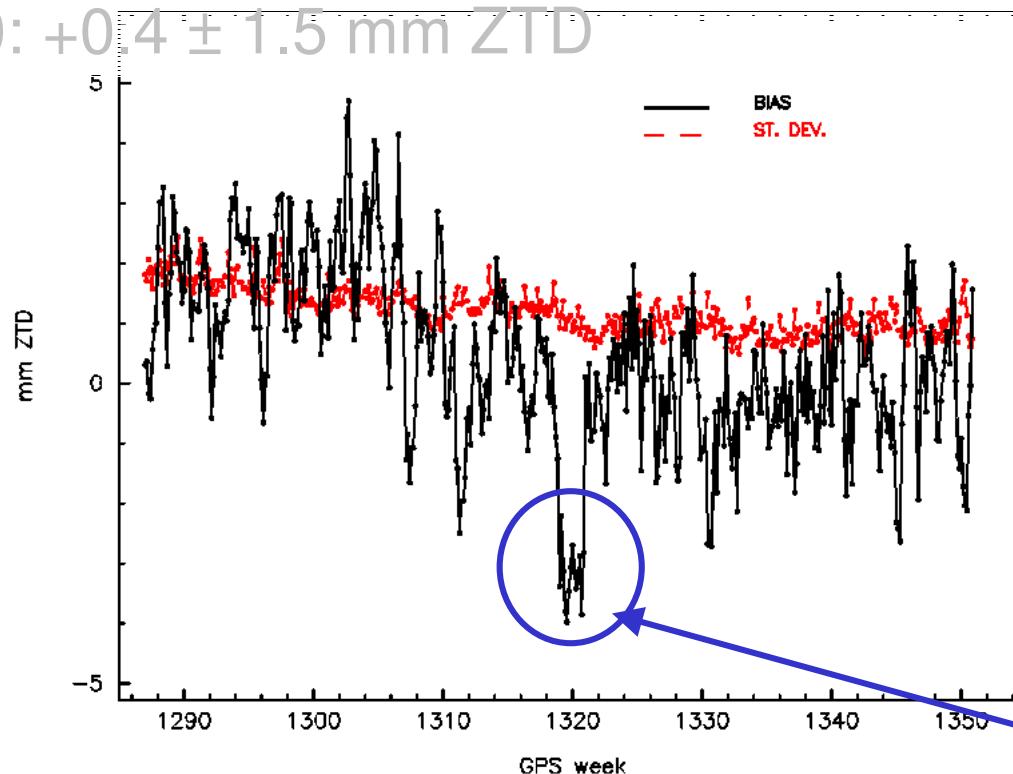

## Daily mean bias and standard deviation

BKG vs. NKG: Same software version, with change for both LACs, ~ 21 common stations

1287-1316: **+1.3**  $\pm$  1.3 mm ZTD (v 4.2/4.2)

1325-1350: **-0.2**  $\pm$  1.0 mm ZTD (v 5.0/5.0)

1287-1350: **+0.4**  $\pm$  1.5 mm ZTD

Reduced bias since v 5.0

V 4.2/5.0  
Mixed for  
2 weeks

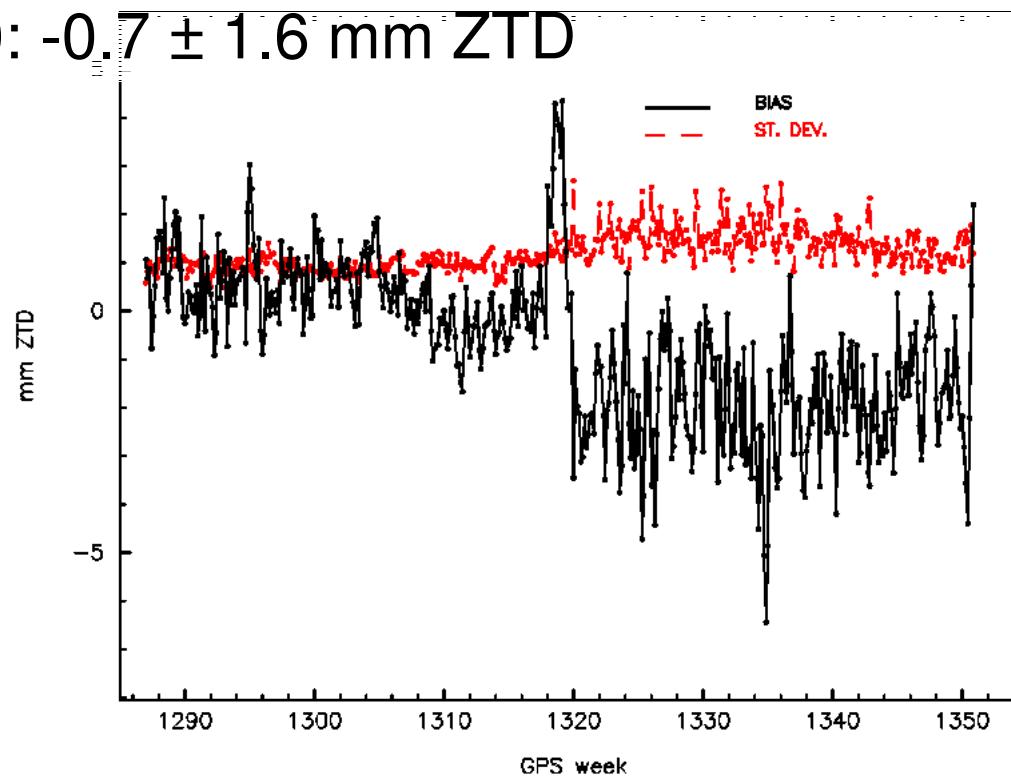

## Daily mean bias and standard deviation

GOP vs. WUT: Same software version, with change for both LACs, ~ 18 common stations

1287-1316: **+0.4**  $\pm$  0.8 mm ZTD (v 4.2/4.2)

1325-1350: **-1.9**  $\pm$  1.2 mm ZTD (v 5.0/5.0)

1287-1350: -0.7  $\pm$  1.6 mm ZTD

Larger Bias with new version ? Increased formal error ?

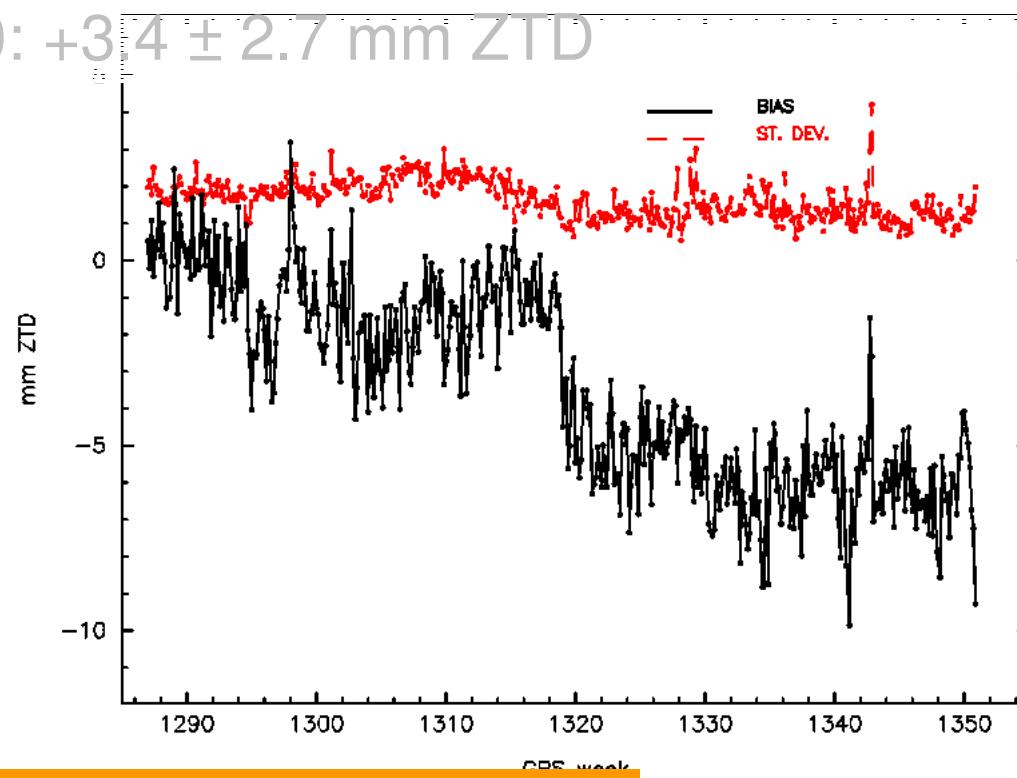

## Daily mean bias and standard deviation

BKG vs. OLG: different software version, ~ 15 common stations

1287-1316: **-1.0**  $\pm$  1.4 mm ZTD (v 4.2/4.2)

1325-1350: **-6.0**  $\pm$  1.2 mm ZTD (v 5.0/4.2)

1287-1350: +3.4  $\pm$  2.7 mm ZTD

Significant bias for mixed versions.

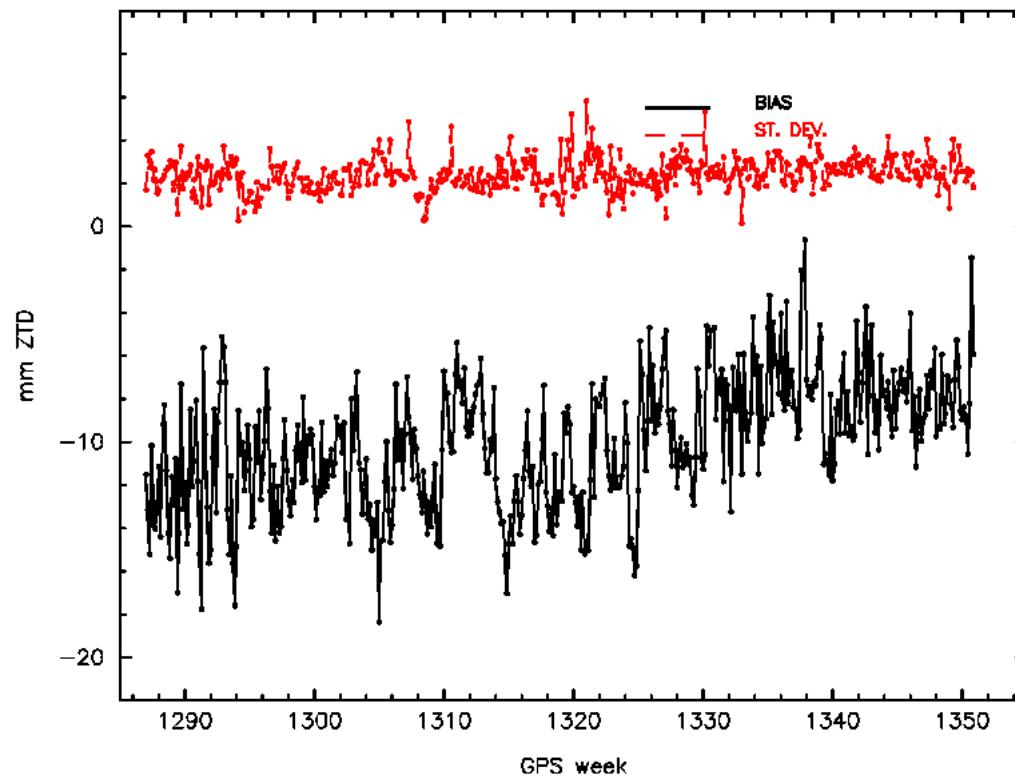

## Daily mean bias and standard deviation

DEO vs. ROB: software change, ~ 7 common stations

1287-1316:  $-11.4 \pm 2.6$  mm ZTD (GIPSY/v4.2)

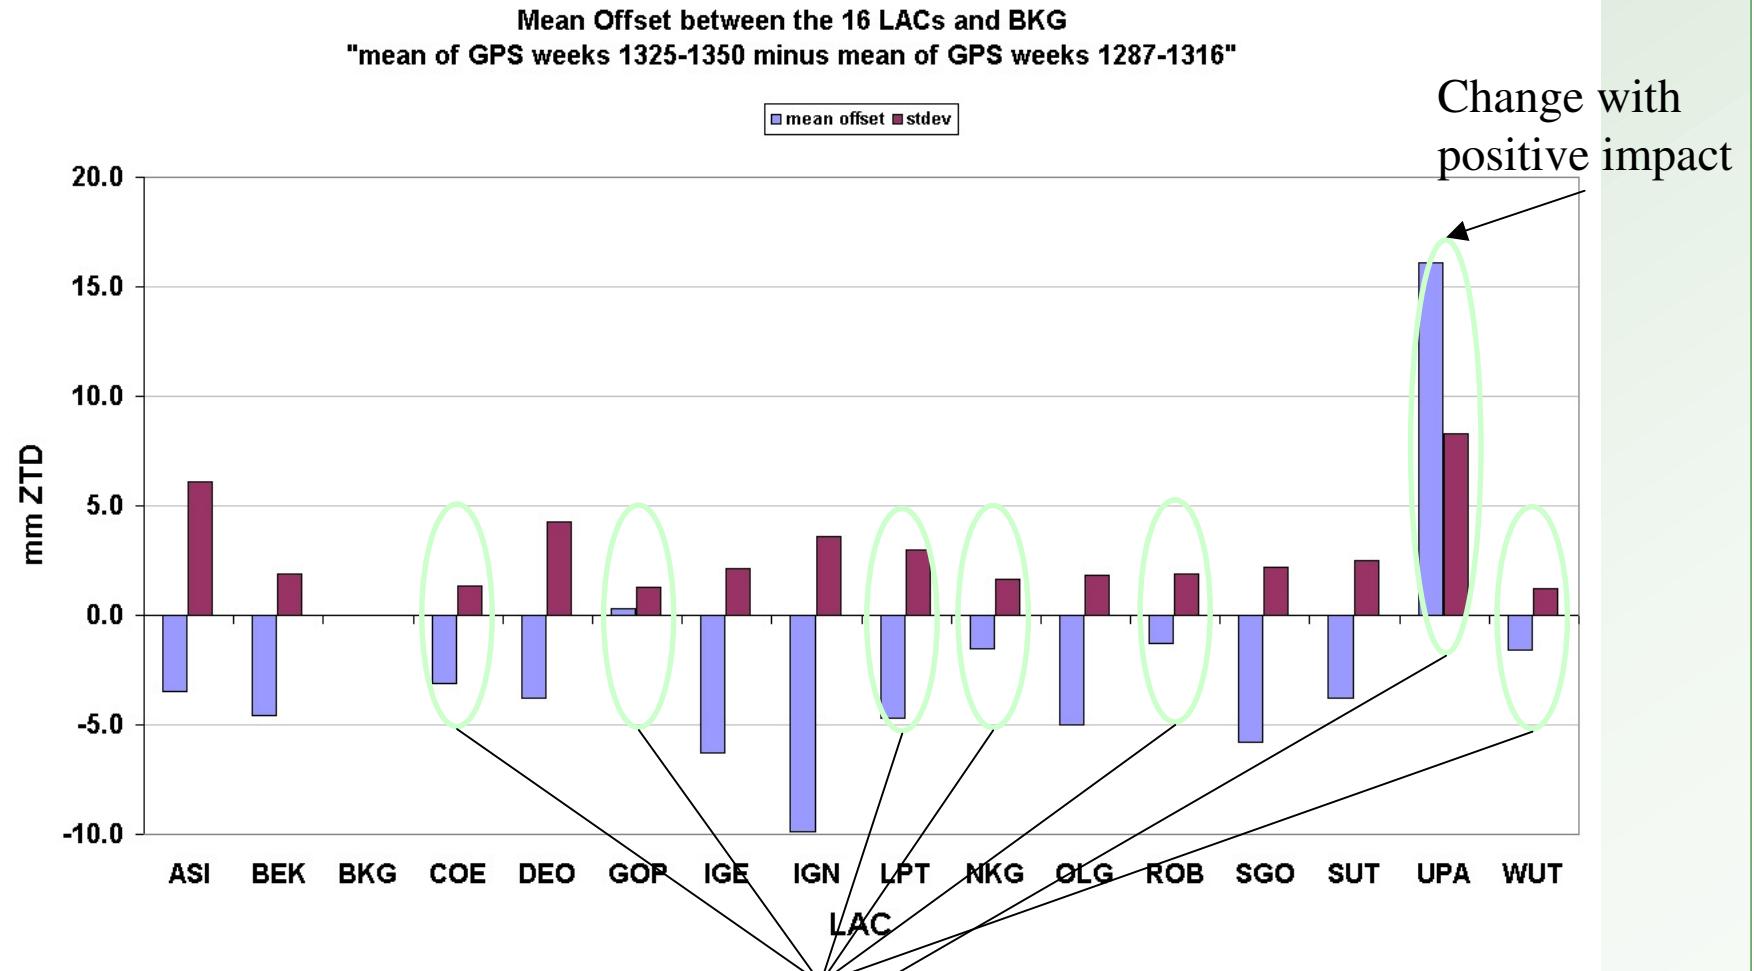

1325-1350:  $-8.0 \pm 2.3$  mm ZTD (GIPSY/v 5.0)

1287-1350:  $-10.0 \pm 3.0$  mm ZTD

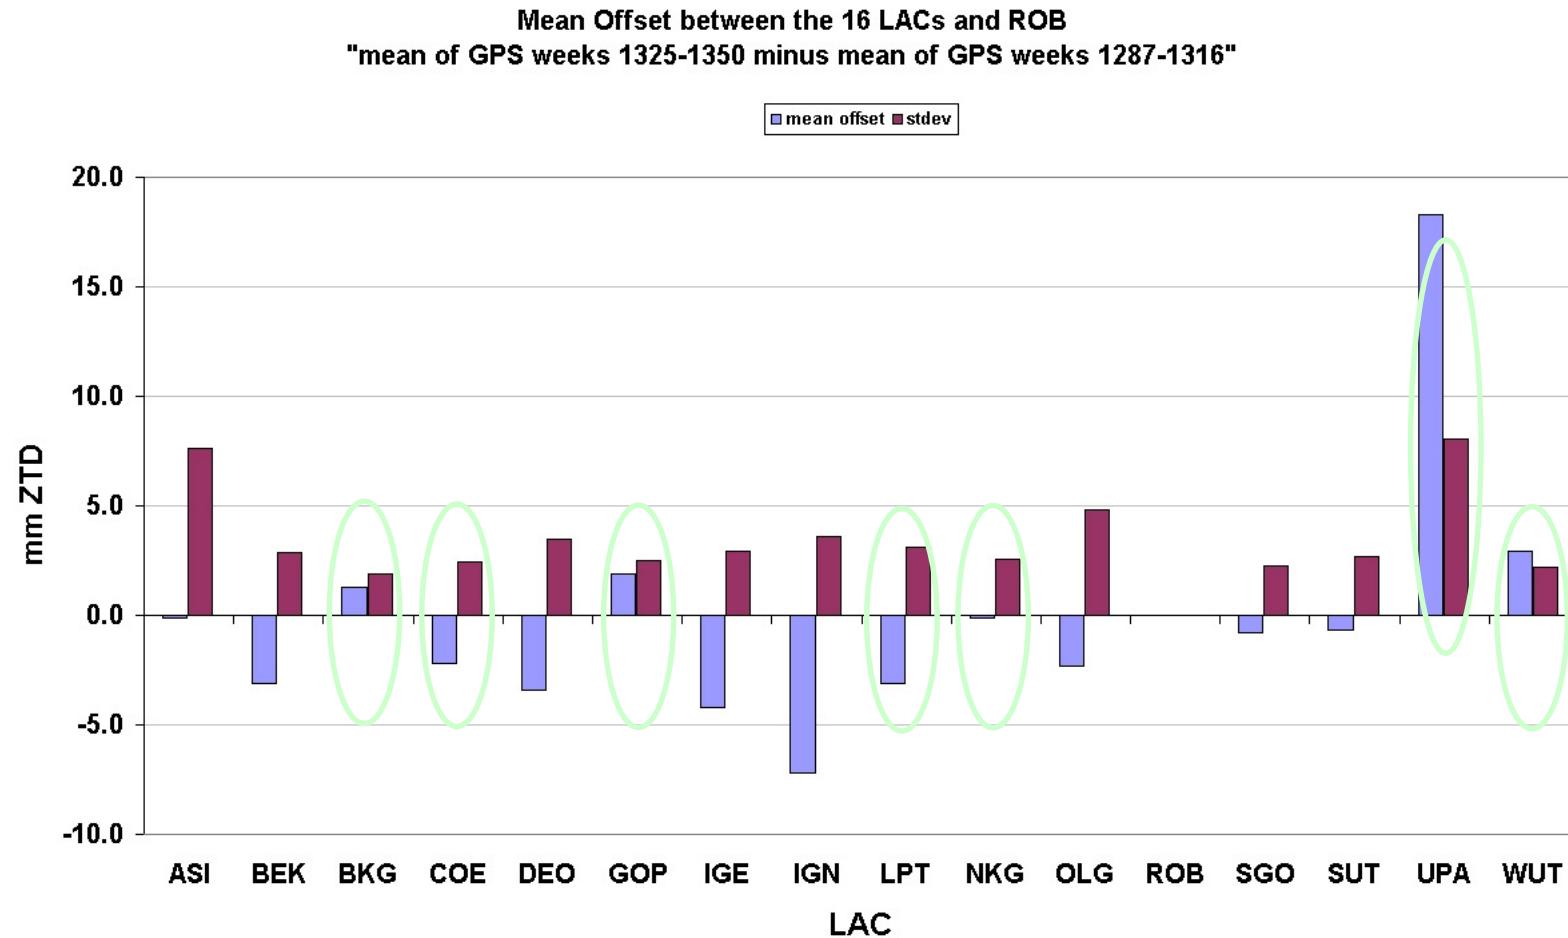

Reduced bias w.r.t. „non-Bernese“ software

# Daily mean bias and standard deviation

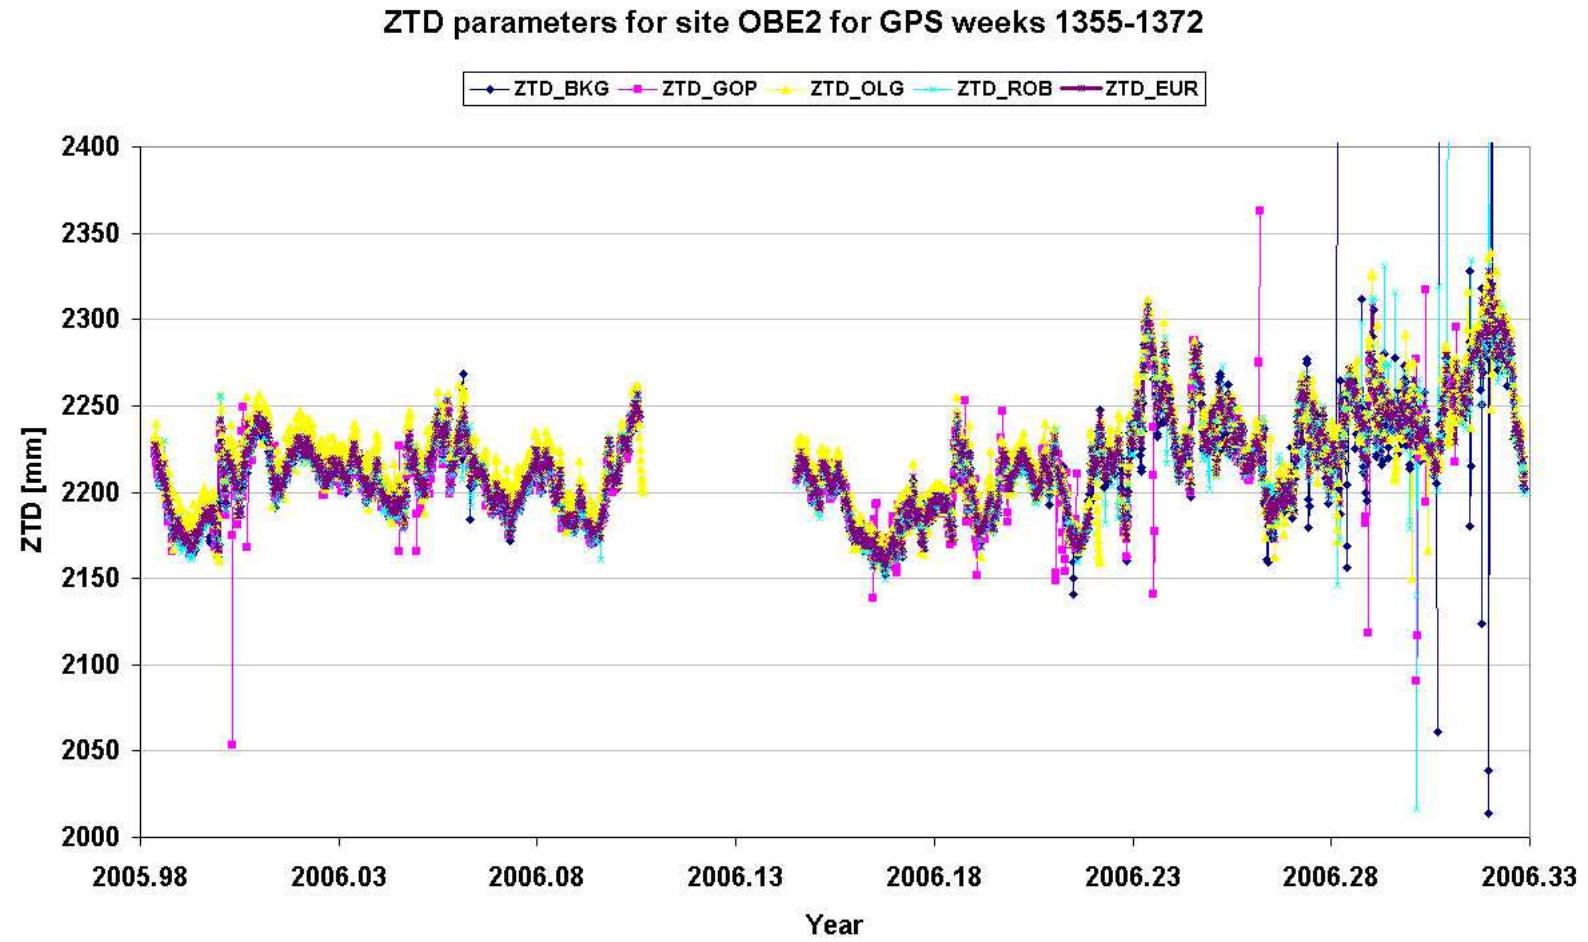

„old“ minus „new“ referenced on BKG (double difference of ZTD)  
-> no significant signal on that level with exception for UPA

# Daily mean bias and standard deviation

„old“ minus „new“ referenced on ROB (double difference of ZTD)

# Examples

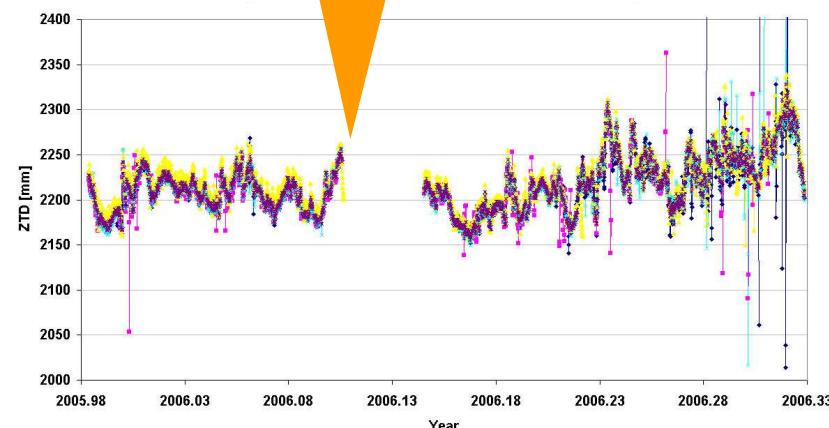

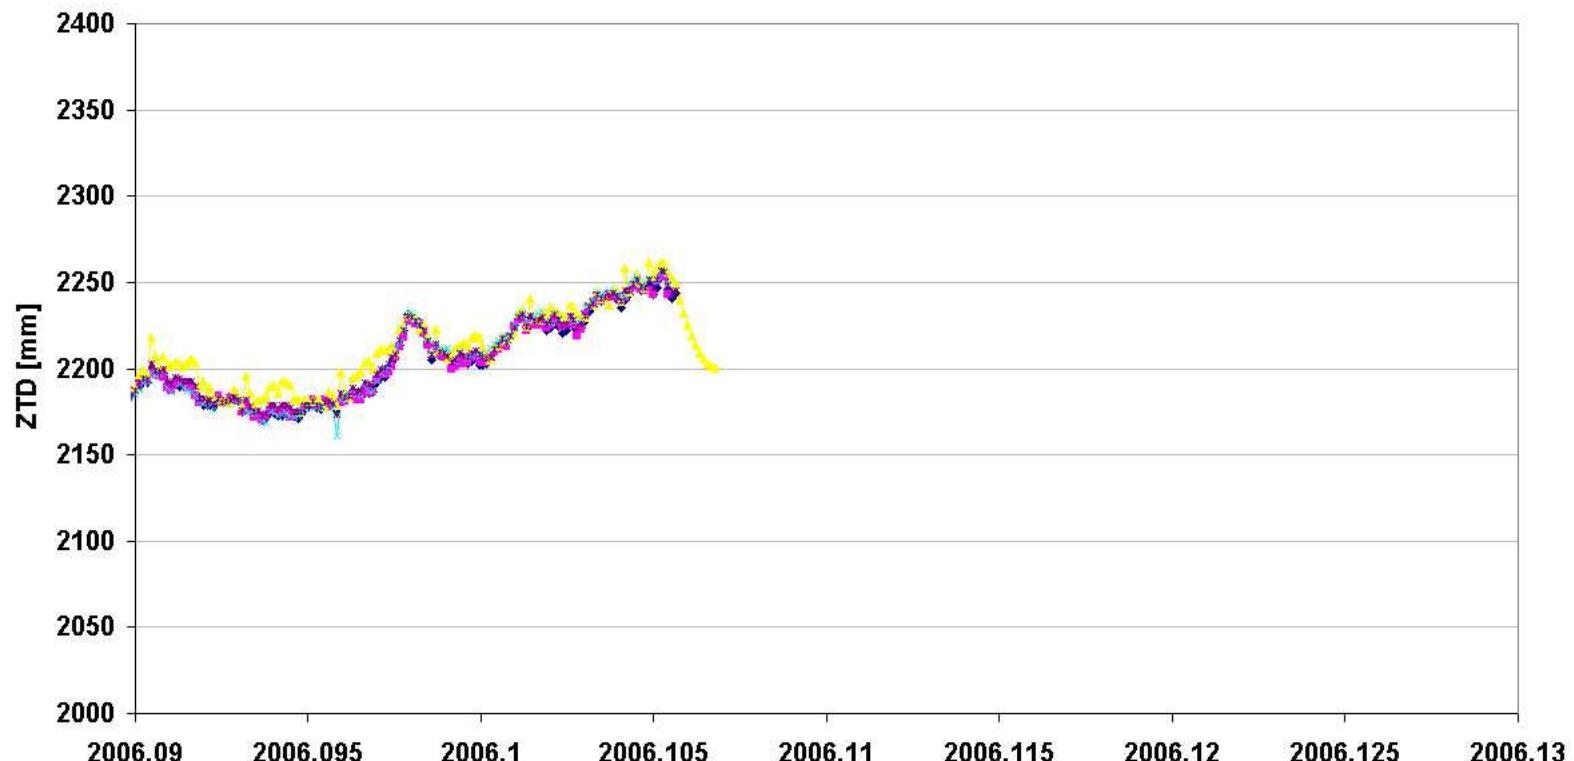

Comparison of ZTD from 4 solutions, appr. 4 month period

„Parameter Estimation“

# Examples

OBE2 2006

From EPN Central Bureau

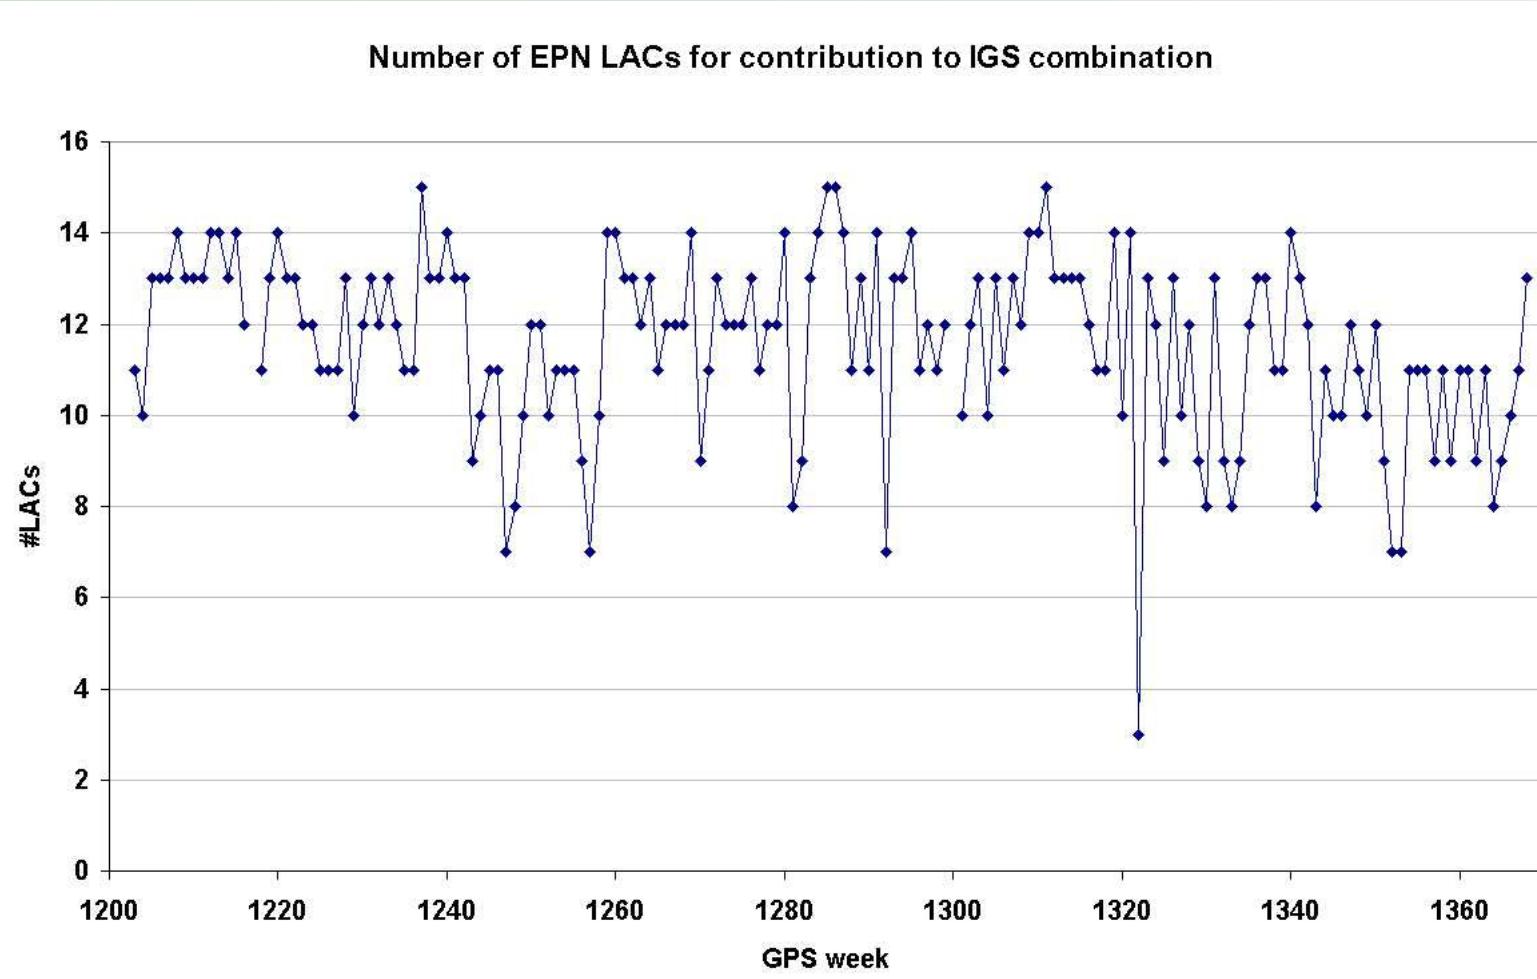

Actually three different products available from IGS  
(<ftp://cddis.gsfc.nasa.gov>):

- combined product with two hours solution (where EPN is contributing with the “rapid” troposphere solution, computation 1 week after final IGS orbit)
- combination of ultra-rapid tropospheric zenith path delay, with one hour solution and update every three hours
- new product, with five minutes solution, more than 250 stations, precise point positioning

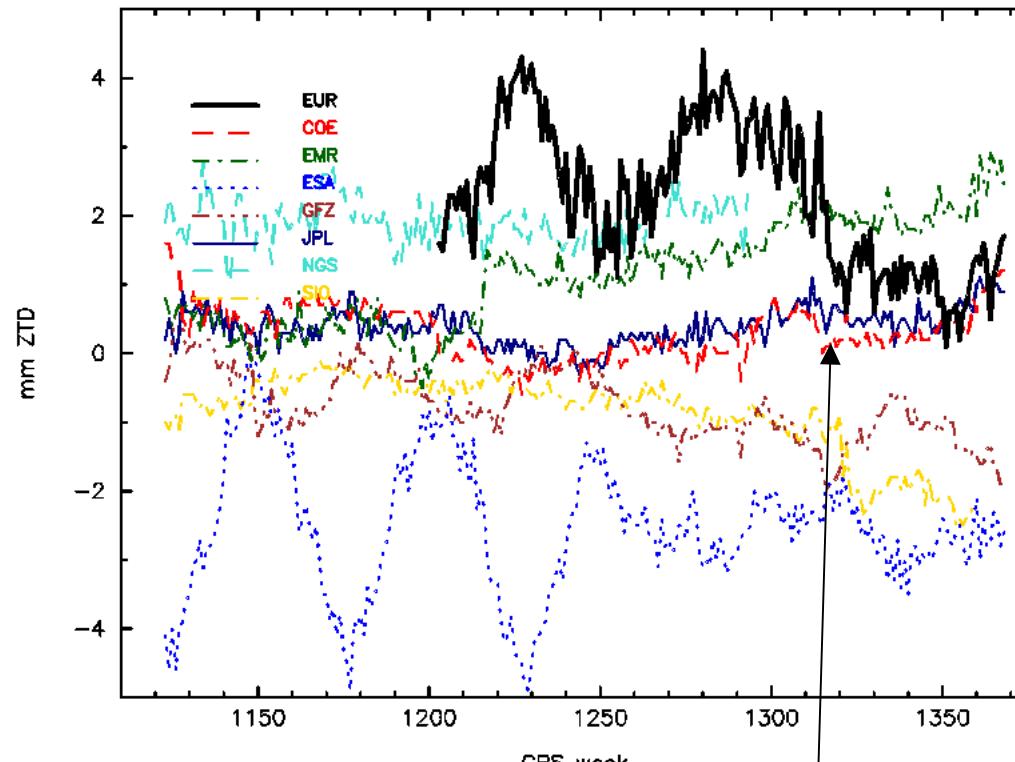

# IGS troposphere parameter combination

## Number of EPN LACs contributing to “rapid” combination

# IGS troposphere parameter combination

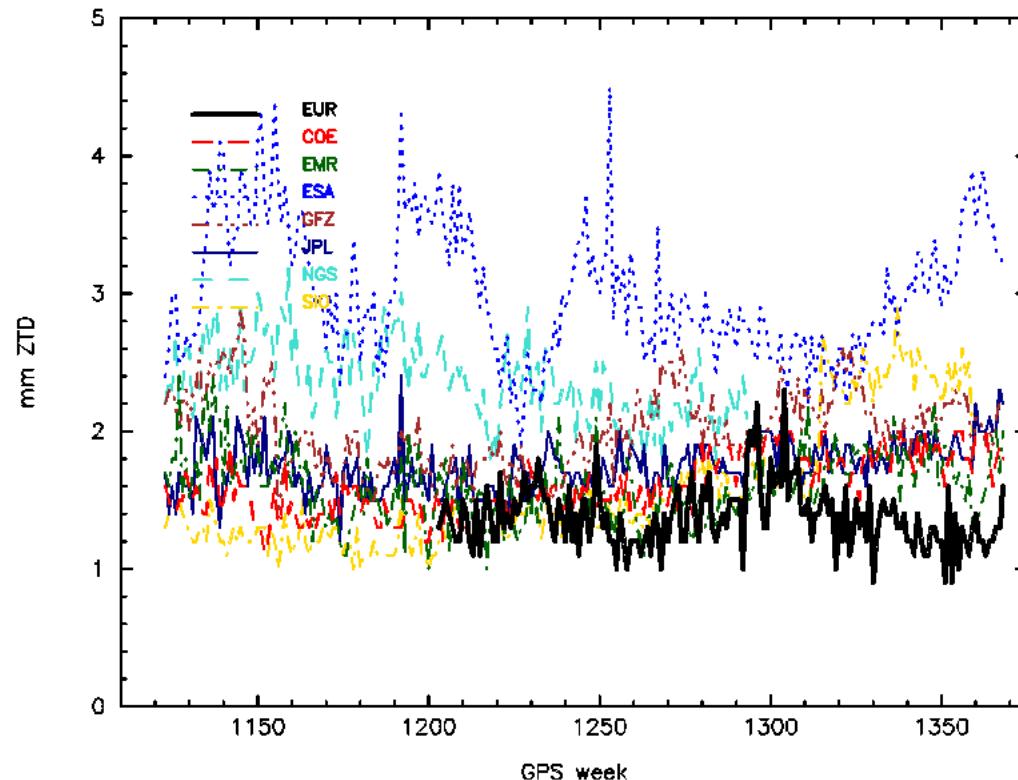

Weekly mean biases for all IGS LACs (taken from the IGS combination summary)

New model for EUR

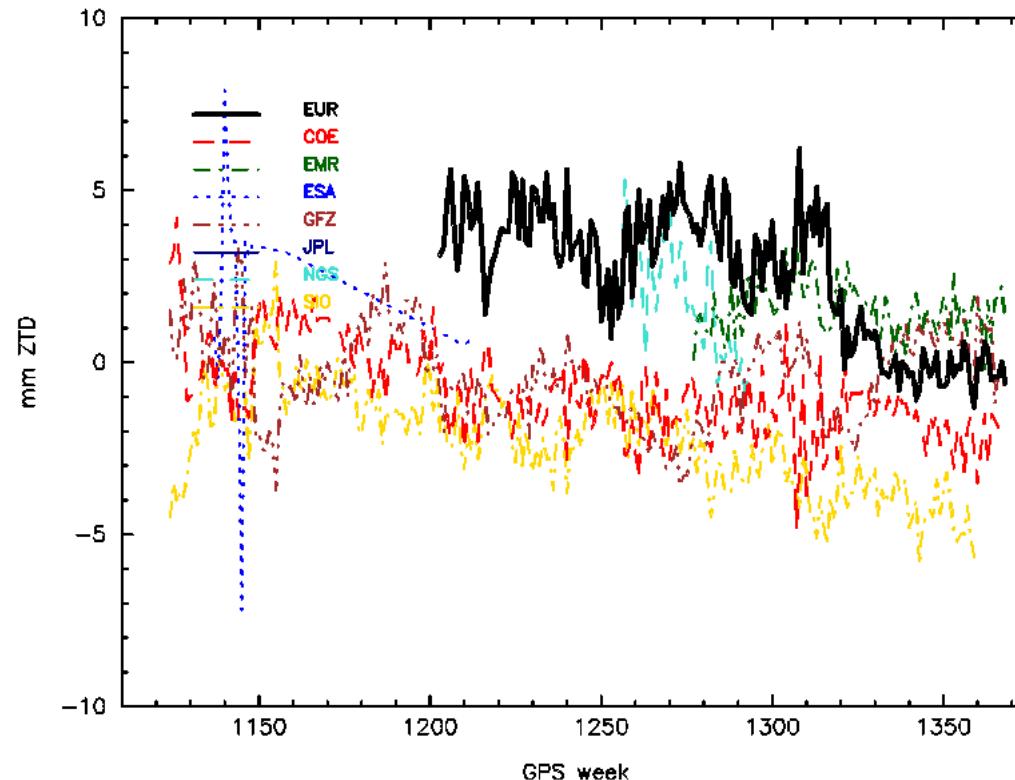

# IGS troposphere parameter combination

## Standard deviation of weekly mean biases for all IGS LACs

# IGS troposphere parameter combination

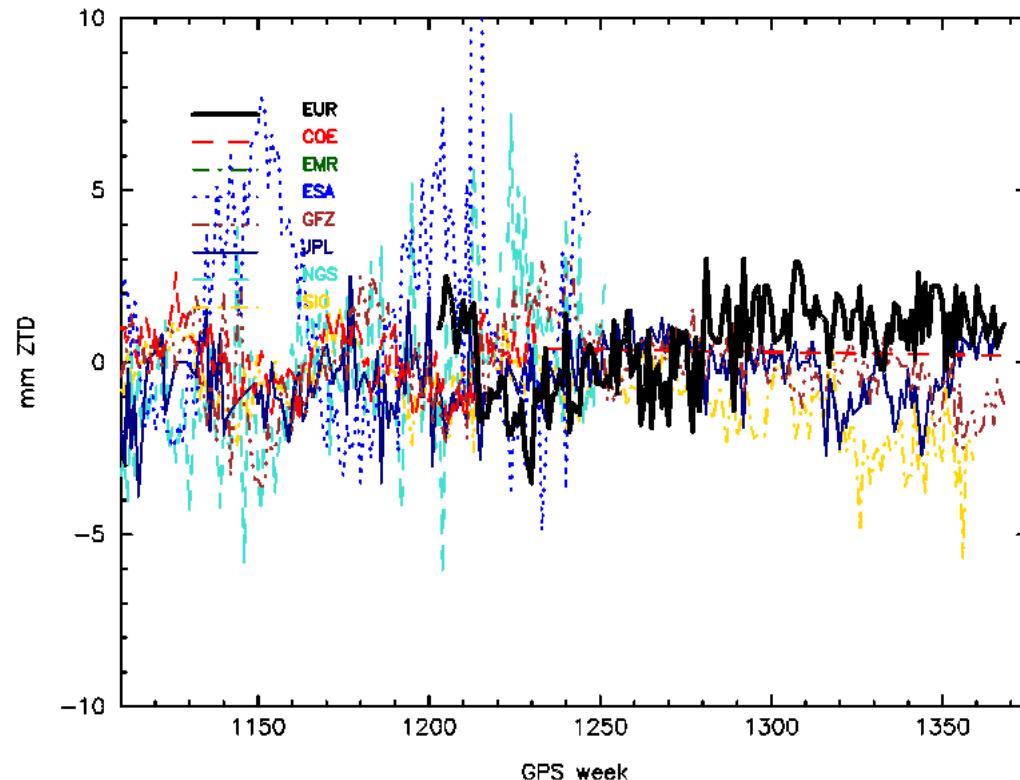

## Weekly mean biases for all LACs – site HOFN

# IGS troposphere parameter combination

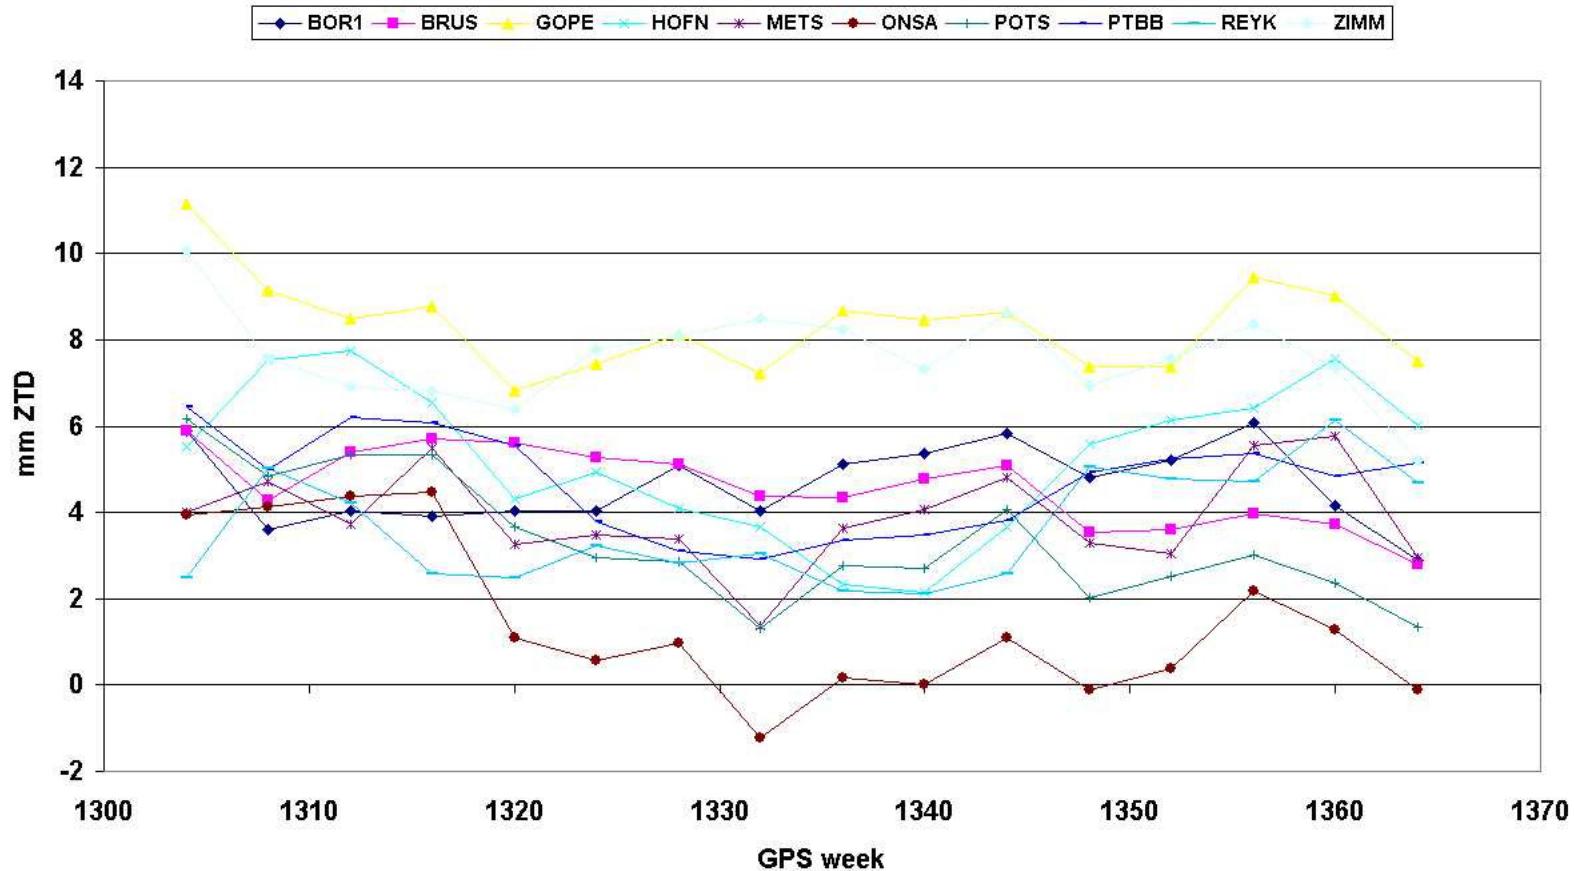

## Weekly mean biases for all LACs – site REYK

# IGS troposphere parameter products

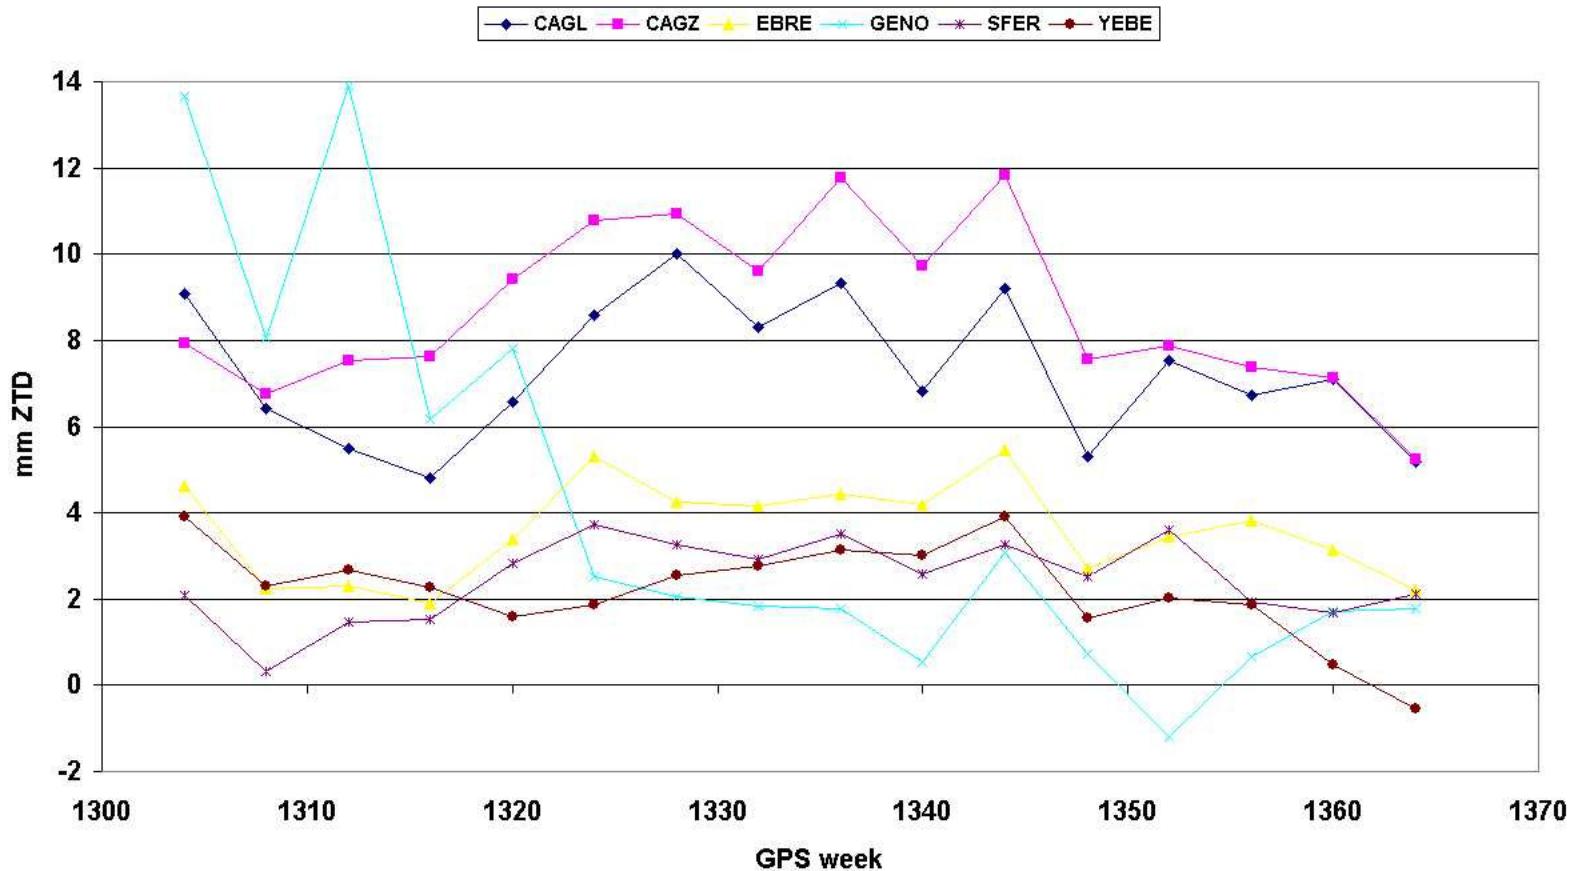

Monthly mean biases between EPN combination and new IGS (PPP) product

# IGS troposphere parameter products

Monthly mean biases between EPN combination and new IGS (PPP) product

## Conclusions

- Change from Bernese version 4.2 to 5.0 gives biases up to 5 mm ZTD
- Biases to IGS combined solution reduced
- Comparison to IGS PPP product shows site dependent differences
- Investigations concerning combined GPS / GLONASS analyses planned
