

GEONAS

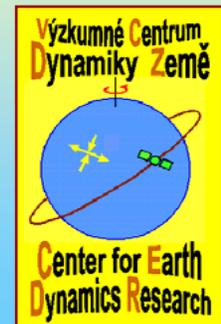

The **GEO**dynamic **Network** of the **Academy**
of **Sciences** of the **Czech Republic**:

**Permanent GNSS observations and routine data
processing in the IRS operational centre.**

**František Mantlík, Vladimír Schenk, Zdeňka Schenková,
Pavel Kottnauer, Milada Grácová and Zdeněk Fučík**

Institute of Rock Structure and Mechanics AS CR
Department of Geodynamics
V Holešovičkách 41
182 09 Praha 8
CZECH REPUBLIC
mantlik@irsm.cas.cz

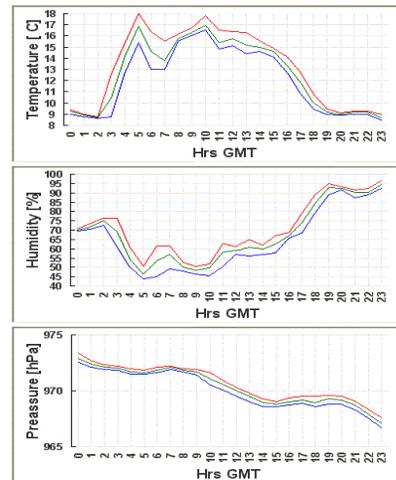

Outlines

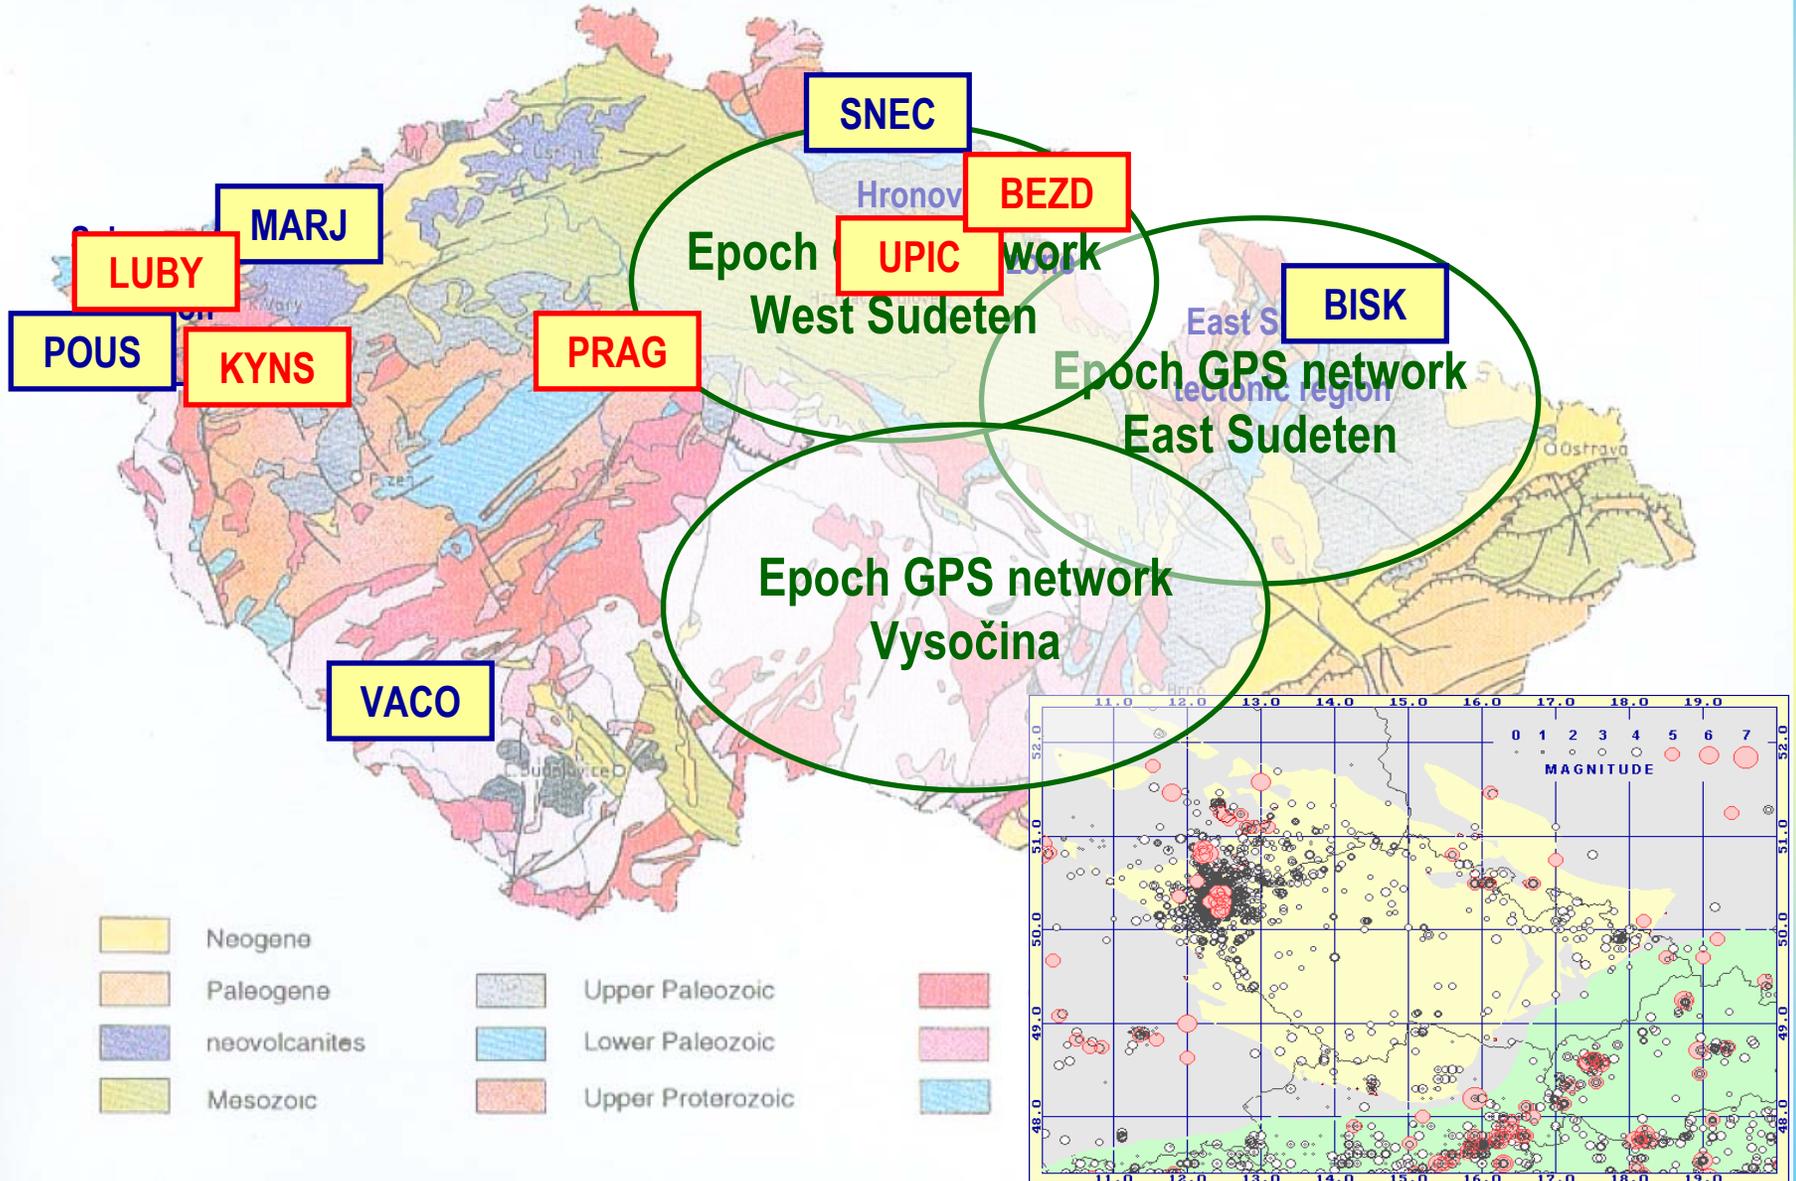

1. Strategy of observatory siting
2. Location, monumentation and observation time spans
3. Observatory equipment and capabilities
4. Operational centre IRS data flow and delivery
5. Routine data processing
6. Outlook

Meteorological data 09.06.2006
observatory BISK

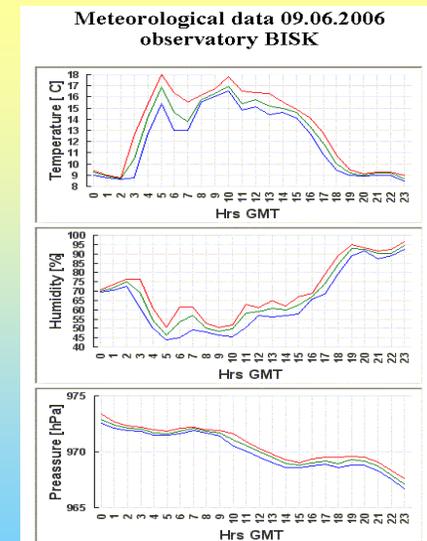

Strategy of observatory siting

Outlines

1. Strategy of observatory siting ✓
2. Location, monumentation and observation time spans ↰
3. Observatory equipment and capabilities
4. Operational centre IRS data flow and delivery
5. Routine data processing
6. Outlook

GNSS Measurements at the top of Snezka Mt. (alt. 1602 m)

SNIE

SNEC

**GPS observatory
operates from
August 23-rd 2001**

GEONAS observatories – first stage up to end 2004

GERMANY

oper. since
Oct. 20-th, 2003

POUS

MARJ

operating since
May 15-th, 2003

VACO

GERMANY

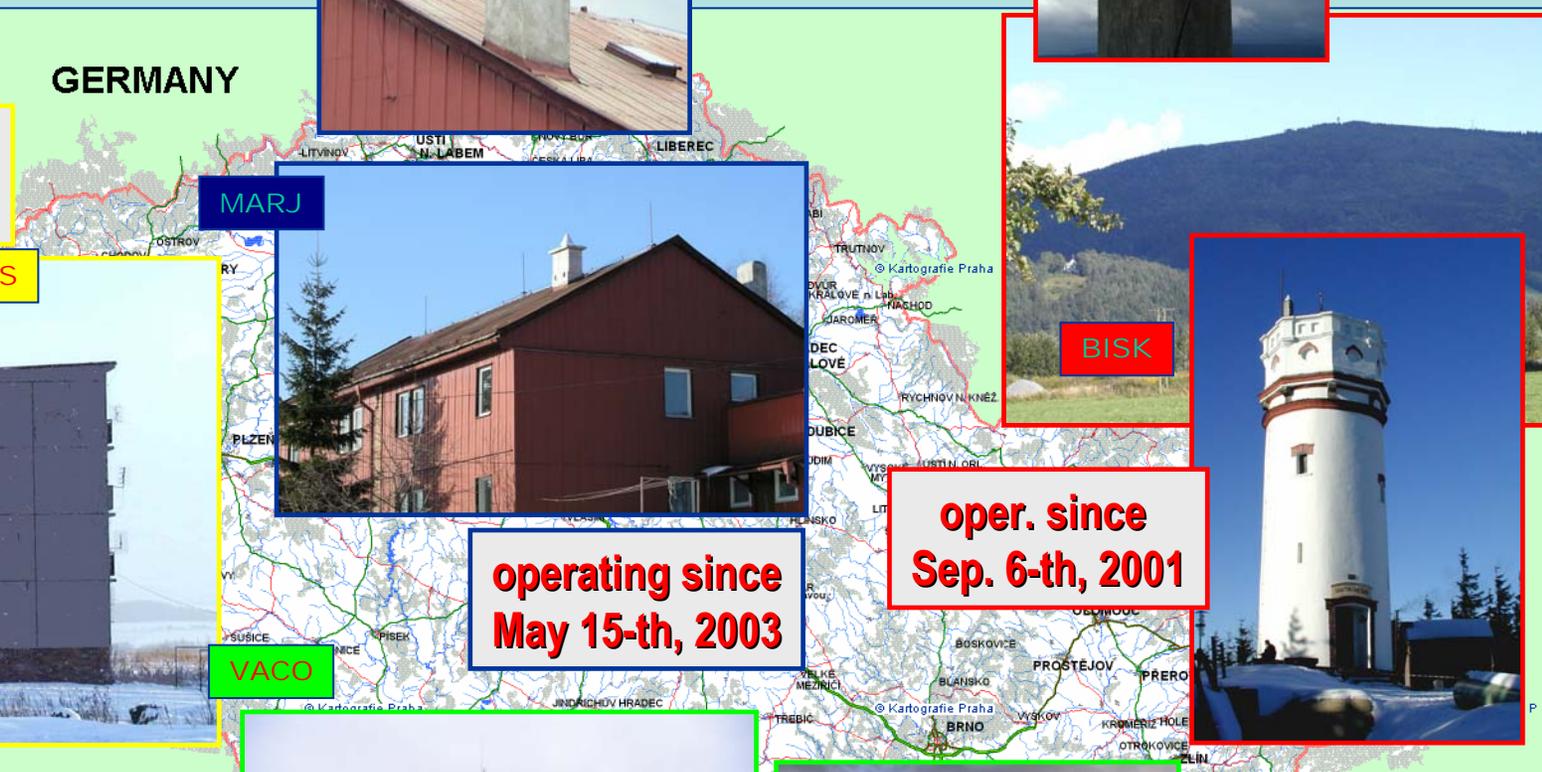

operating since
Oct. 20-th 2004

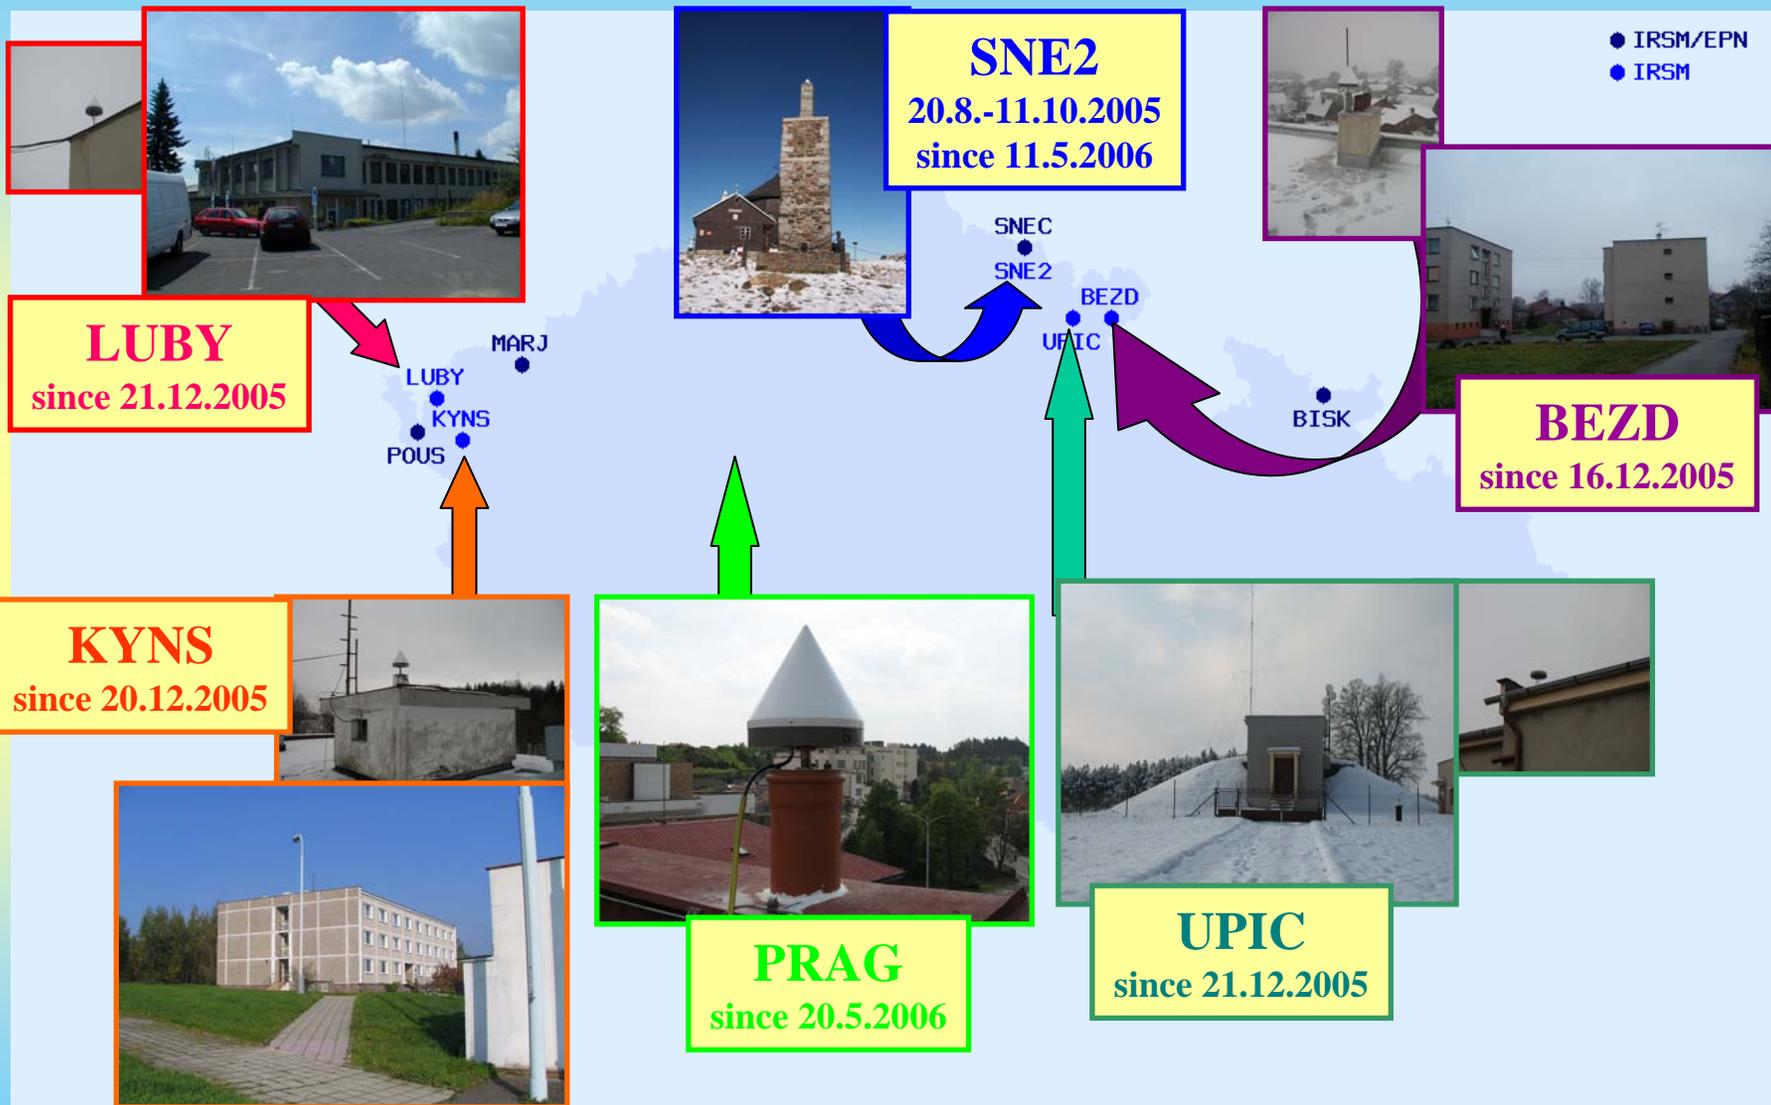

SLOVAKIA

oper. since
Sep. 6-th, 2001

BISK

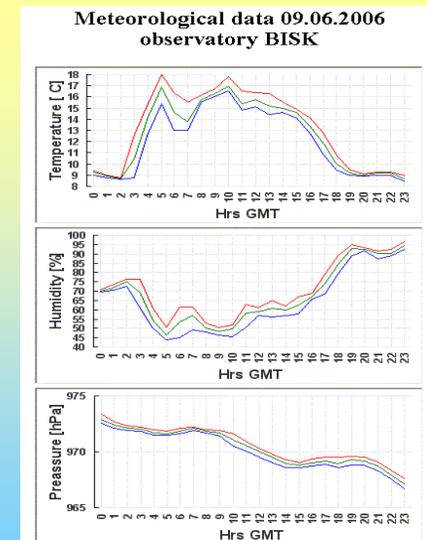

GEONAS observatories – second stage 2005-2006:

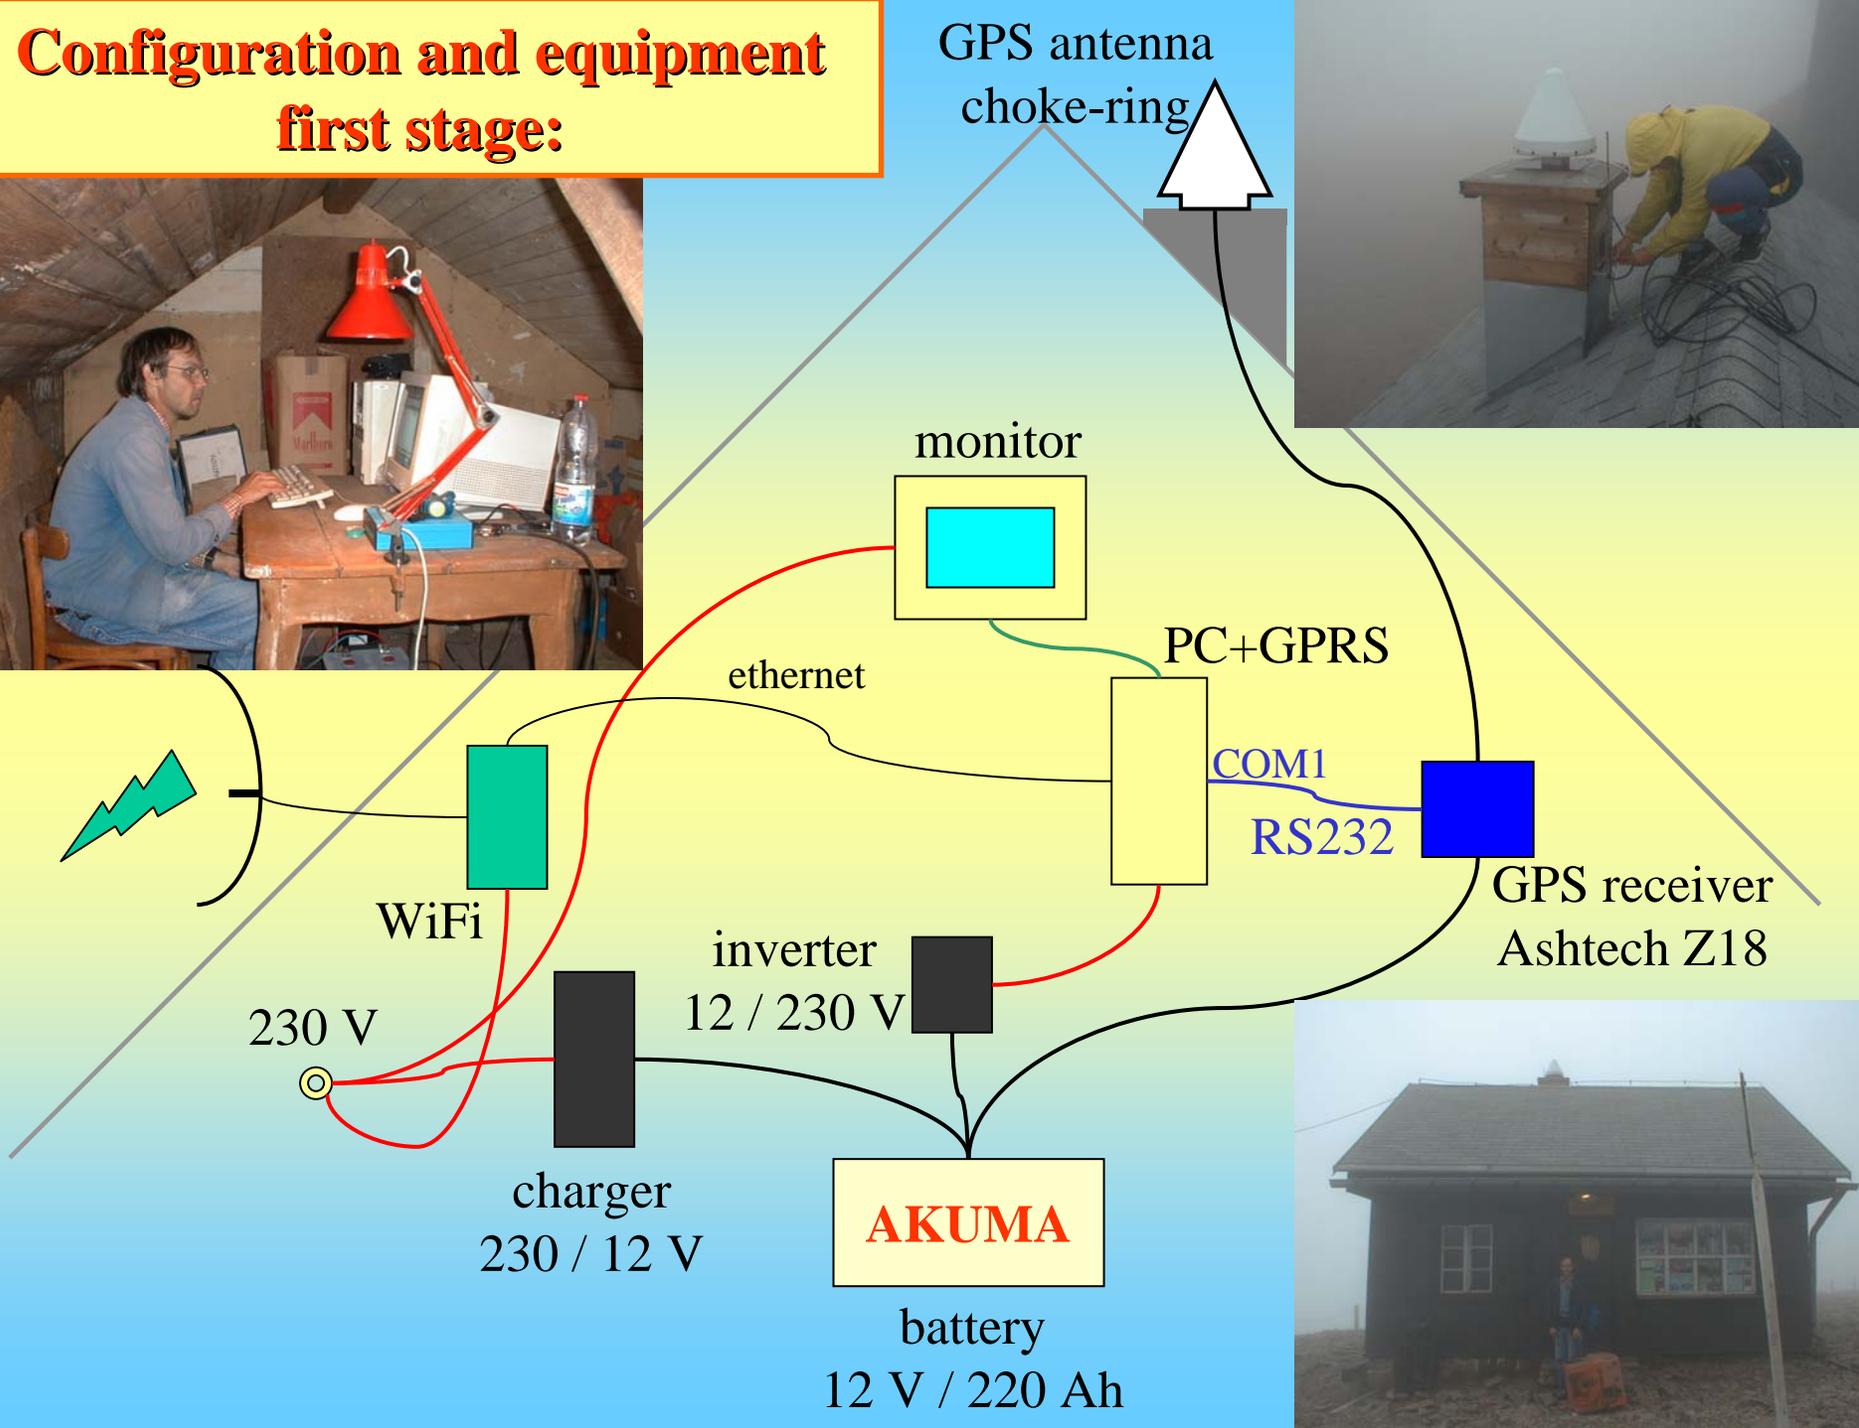

Outlines

1. Strategy of observatory siting ✓
2. Location, monumentation and observation time spans ✓
3. Observatory equipment and capabilities ↰
4. Operational centre IRS data flow and delivery
5. Routine data processing
6. Outlook

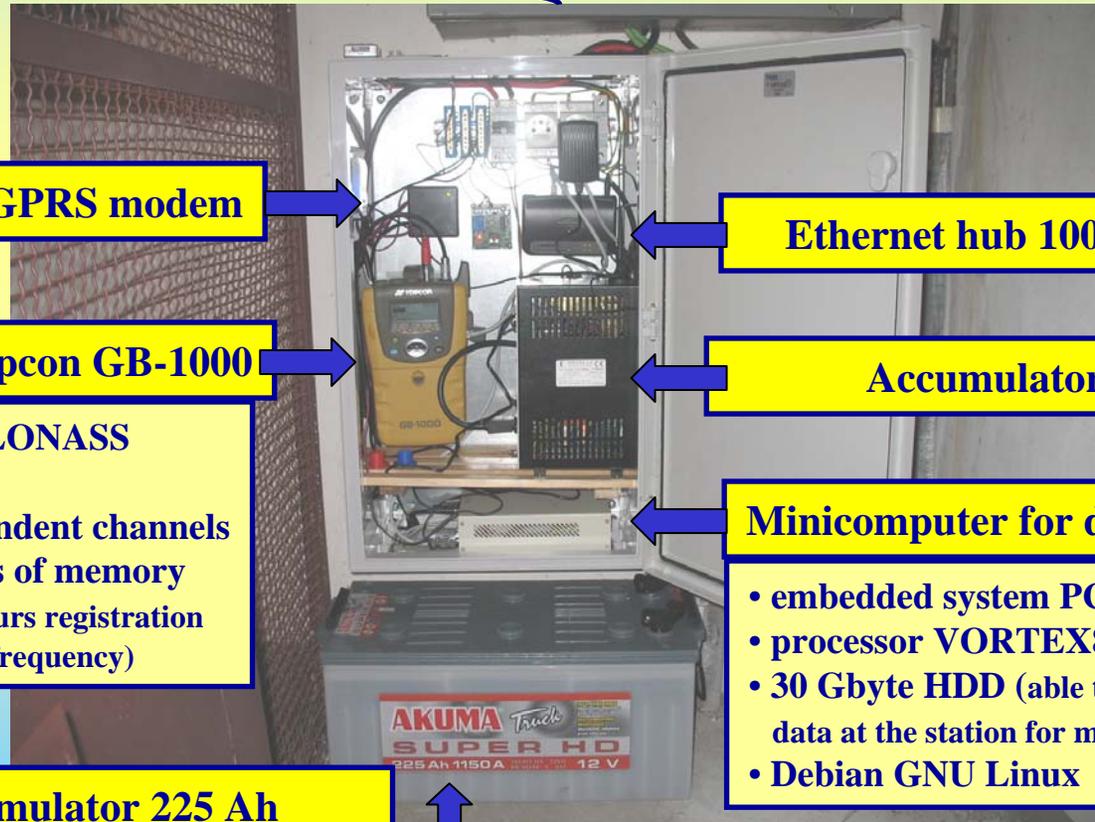

Configuration and equipment first stage:

Configuration and equipment of the GEONAS observatories – 2-nd stage:

GNSS antenna Topcon CR3 GGD

GPRS modem

Ethernet hub 100 Mbit/s

GNSS receiver Topcon GB-1000

Accumulator charger

- GPS + GLONASS
- L1 + L2
- 40 independent channels
- 96 Mbytes of memory
(cca 30 hours registration
at 1 Hz frequency)

Minicomputer for data processing

- embedded system PC
- processor VORTEX86 / 166 MHz
- 30 Gbyte HDD (able to store
data at the station for min. 8 months)
- Debian GNU Linux

Accumulator 225 Ah
(25-30 hrs of operation in case of public
electrical supply failure)

Supplementary instrumentation – meteorological etc.

METEO sensors ANEMO:

Temperature and relative humidity sensor

TH99 (-40°C/+85 °C, 0/100 % rel. humidity)

Pressure sensor type R (800/1200 hPa)

Sampling rate 30 sec

Installed at the BISK, MARJ

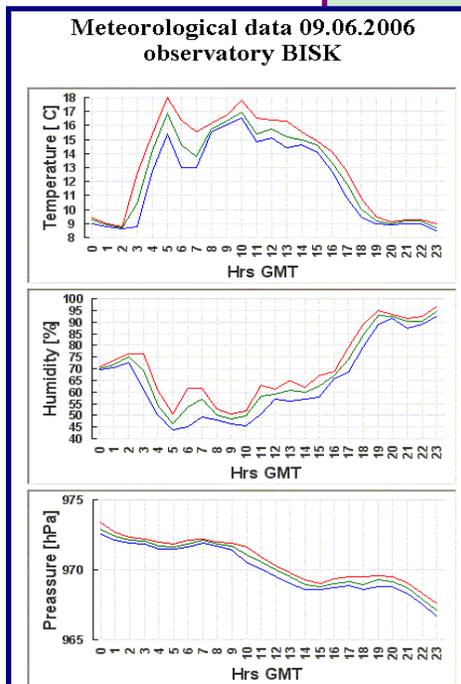

and SNEC observatories.

Web camera

Monitoring of local weather conditions
and snow coverage of the antenna radome.

One still image every 5 minutes.

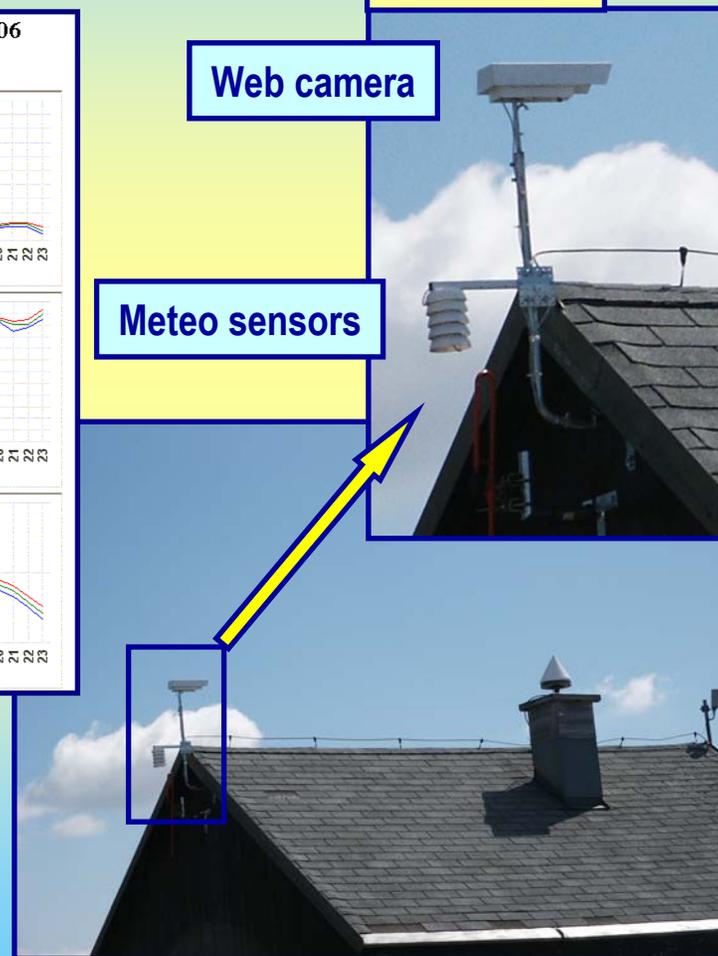

Installed at the SNEC observatory.

SNEC

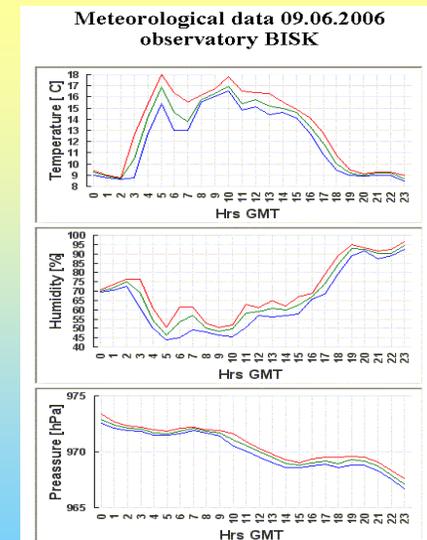

Web camera

Meteo sensors

GEONAS Examples of time series plots

Properties of time series plots presented:

- computed using BERNESE GPS software version 5.0
- 30 second reg. intervals
- CODE orbits and Earth rotation parameters
- NAVSTAR and GLONASS GNSS signals
- constrained network solutions with 4 IGS fiducial stations: POTS, PENC, WTZR and BOR1
- daily processing coordinates results plotted without smoothing

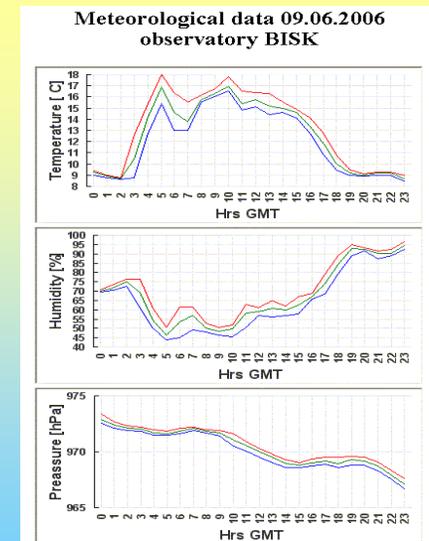

Snow cover influence at the mountain stations
