

# **INTEGRATION OF THE ASG-EUPOS NETWORK WITH FIRST ORDER NATIONAL GEODETIC NETWORKS – FINAL RESULTS OF THE SRC SOLUTION**

*Anna Swiatek, Leszek Jaworski, Ryszard Zdunek, Janusz B. Zieliński  
Space Research Centre P.A.S., Warsaw, POLAND*

# GOALS

---

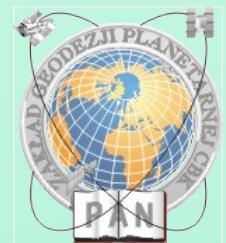

The main goal of measurement campaigns in 2008 i 2010/2011 was the integration of the ASG-EUPOS network with the existing fundamental national networks.

Additional goals performed during campaigns:

- test of the ASG-EUPOS system (2008)
- fixing ground eccentric points for the ASG-EUPOS stations
- re-measurements of EUREF-POL, POLREF and EUVN networks points
- measurement of selected points of fundamental horizontal network
- analysis of the location of points of basic network

# PROCESSING NUMBER OF POINTS

## □ 2008 GPS Campaign – 286 points

- 135 EPN/IGS, ASG-EUPOS, SAPOS, LITPOS, SKPOS and CZEPOS stations
- 151 main field points (POLREF, EUVN, EUREF-POL)

## □ 2010/2011 GNSS Campaign – 538 points

- 147 EPN/IGS, ASG-EUPOS, SAPOS, LITPOS, SKPOS and CZEPOS stations
- 391 main field points (POLREF, EUVN, I-class and eccentric points A-class of the ASG-EUPOS stations)

## □ Joint solution – 692 points

# PROCESSING PROCESSING PARAMETERS

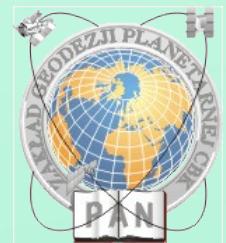

## Bernese GPS Software ver. 5.0

According to the EPN standards.

- ITRF 2005 for epoch of campaign
- Final IGS orbits
- IGS ERP
- QIF method of ambiguity determination
- variants for elevation cut off :
  - 5 degrees
  - 10 degrees
- observation interval 30 sec
- troposphere corrections – NMF
- Phase centre variation absolute model – EPN\_05.ATX

# PROCESSING COMPUTATION VARIANTS

## □ 2008 CAMPAIGN

- GPS data for diurnal sessions for elevation cut off variants: 5, 10, 15 degrees
- GPS data for 24-hour sessions (from 12:00 GMT till 12:00 GMT) for elevation cut off 10 degrees

## □ 2010/2011 CAMPAIGN AND JOINT SOLUTION

- GPS data for 24-hour sessions (from 12:00 GMT till 12:00 GMT) for elevation cut off 5 and 10 degrees
- GPS and GLONASS data for 24-hour sessions (from 12:00 GMT till 12:00 GMT) for elevation cut off 5 and 10 degrees
- joint solution of GPS data for 2008 and 2010/2011 campaigns for 24-hour sessions (from 12:00 GMT till 12:00 GMT) for elevation cut off 5 and 10 degrees

# METHOD OF COMPARISON

- EUREF-POL (1992, 2001), POLREF (1994 and 1995), EUVN (1997) networks and fundamental national horizontal network (1996/97) (EUREF89)
- for re-measurement in 2008 and 2010 (ITRF2005/ ETRF2000).

Because of the difference between reference systems used for realisation of different networks, comparison was made using 7-parameter Helmert transformation.

$$\begin{bmatrix} X_2 \\ Y_2 \\ Z_2 \end{bmatrix} = \begin{bmatrix} X_1 \\ Y_1 \\ Z_1 \end{bmatrix} + \begin{bmatrix} T_X \\ T_Y \\ T_Z \end{bmatrix} + D_{1,2} \cdot \begin{bmatrix} X_1 \\ Y_1 \\ Z_1 \end{bmatrix} + \begin{bmatrix} 0 & -R_Z & R_Y \\ R_Z & 0 & -R_X \\ -R_Y & R_X & 0 \end{bmatrix} \cdot \begin{bmatrix} X_A \\ Y_A \\ Z_A \end{bmatrix}$$

# **FUNDAMENTAL NATIONAL HORIZONTAL NETWORK - I-CLASS**

# CONCLUSIONS

---

- Stability of coordinates determination for joint solution of 2008 and 2010/11 campaigns is on average below  $\pm 1.5$  mm in horizontal components and about  $\pm 3.5$  mm for heights.
- The results of comparisons for the different solutions do not show significant differences caused by different measurement epoch, elevation cut off for calculation and types of observations (GPS or GPS/GLONASS).
- The results show a good agreement for catalogue coordinates of points EUREF-POL, POLREF and EUVN networks with the new appointment.

# CONCLUSIONS

---

- Re-measurement of POLREF and EUVN points allowed to update the coordinates and verify its accuracy and stability over time.
  
- Measured points of I-class horizontal network show a high inhomogeneity in the accuracy of the designation, and the error rate several times higher than for new networks, designed for GPS technique.
