# Integrated Geodetic Spatial Reference

- **Holistic view of the geometrically and physically defined components** - Determination of 3D / 2D position / ellipsoidal height / normal height / gravity / undulation / geoid.
- **Geodetic Fundamental Points (GGP)** – multifunctional representatives of the integrated geodetic spatial reference.
- **„cm“-geoid**: precisely modeled height reference surface.
- points have a function as **geo-sensors**.
- monitoring with respect to the **product standard**
- Integrated Geodetic **Spatial Reference (t) !!!**

# 1. order leveling 2006-2012

## 1. order leveling network (DHHN)

312 loops (level of error):  
224 (72%) in the 1. third  
78 (25%) in the 2. third  
10 ( 3%) in the 3. third  
permissible inconsistency

$$Z_U = \pm 2 \cdot \sqrt{U}$$

mean error: 0,32mm/km

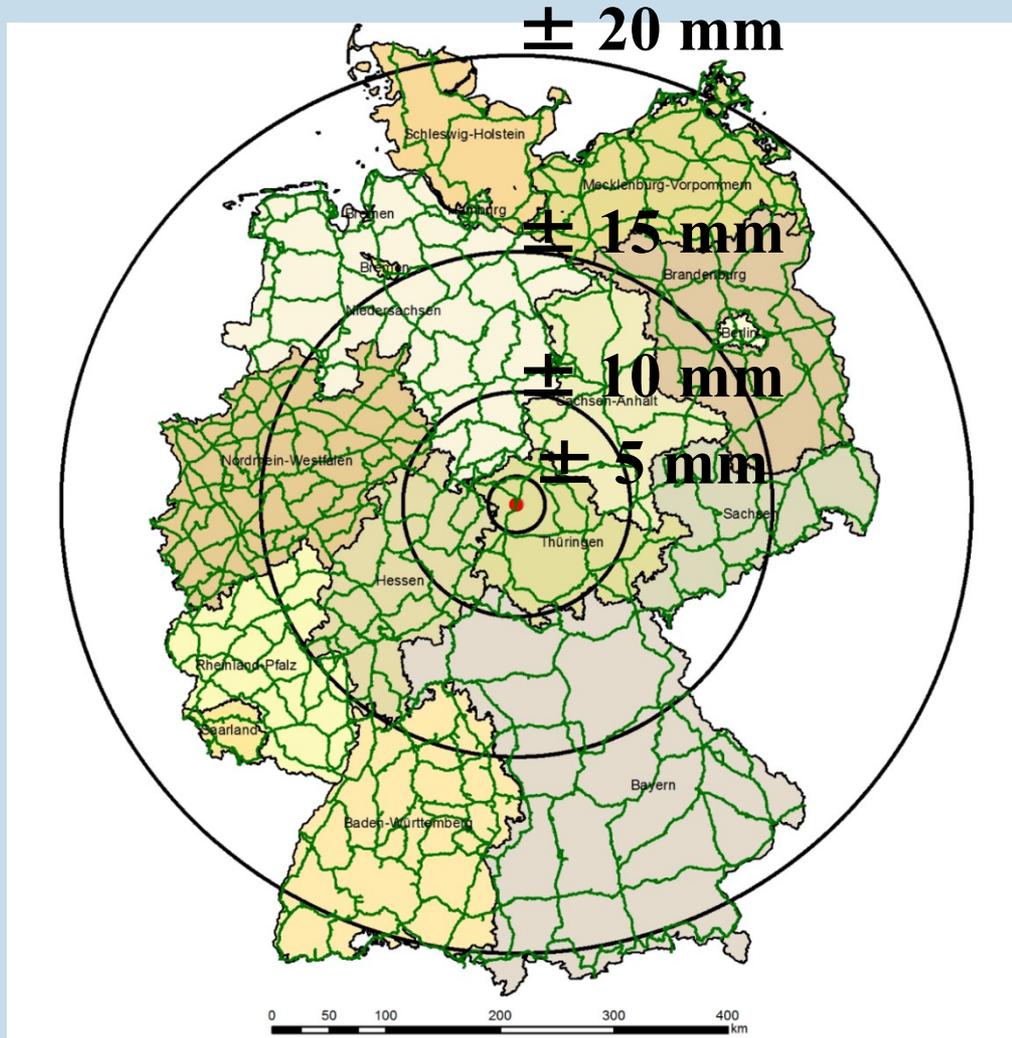

inconsistency of the outer loop of the  
entire network (5350km):

	<b>1992</b>	<b>2016</b>
outer loop [km]	4743	5350
inconsistency [mm]	138,3	13,3
permissible [mm]	137,7	146,3

# Integrated Geodetic Spatial Reference realisation 2016

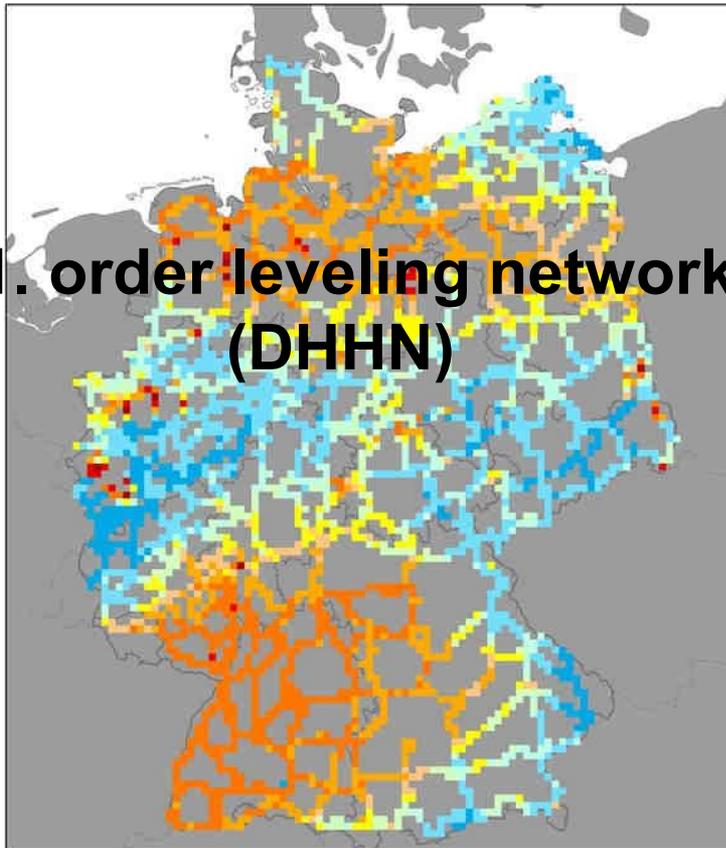

- **2D:** The introduction of (new) coordinates ETRS89 / DREF91 (realization 2016) in SAPOS has no impact on the real estate cadaster
- **height:** Elevation changes in the range of +/- 35 mm occur between (DHHN) 1992 and 2016, and significantly higher changes occur in areas with mining activities.
- **„1cm“-geoid:** GCG2016 (geoid derived by BKG) will increase the importance of GNSS. The GNSS measurement technique will replace other measurement techniques as the most economical and accurate one.
- **Geodetic Fundamental Points (GGP)** realize the integrated spatial reference, **SAPOS (RTK-GNSS-network)** actively provide the spatial reference as a contribution to the spatial data infrastructure.

# Integrated Geodetic Spatial Reference temporal changes

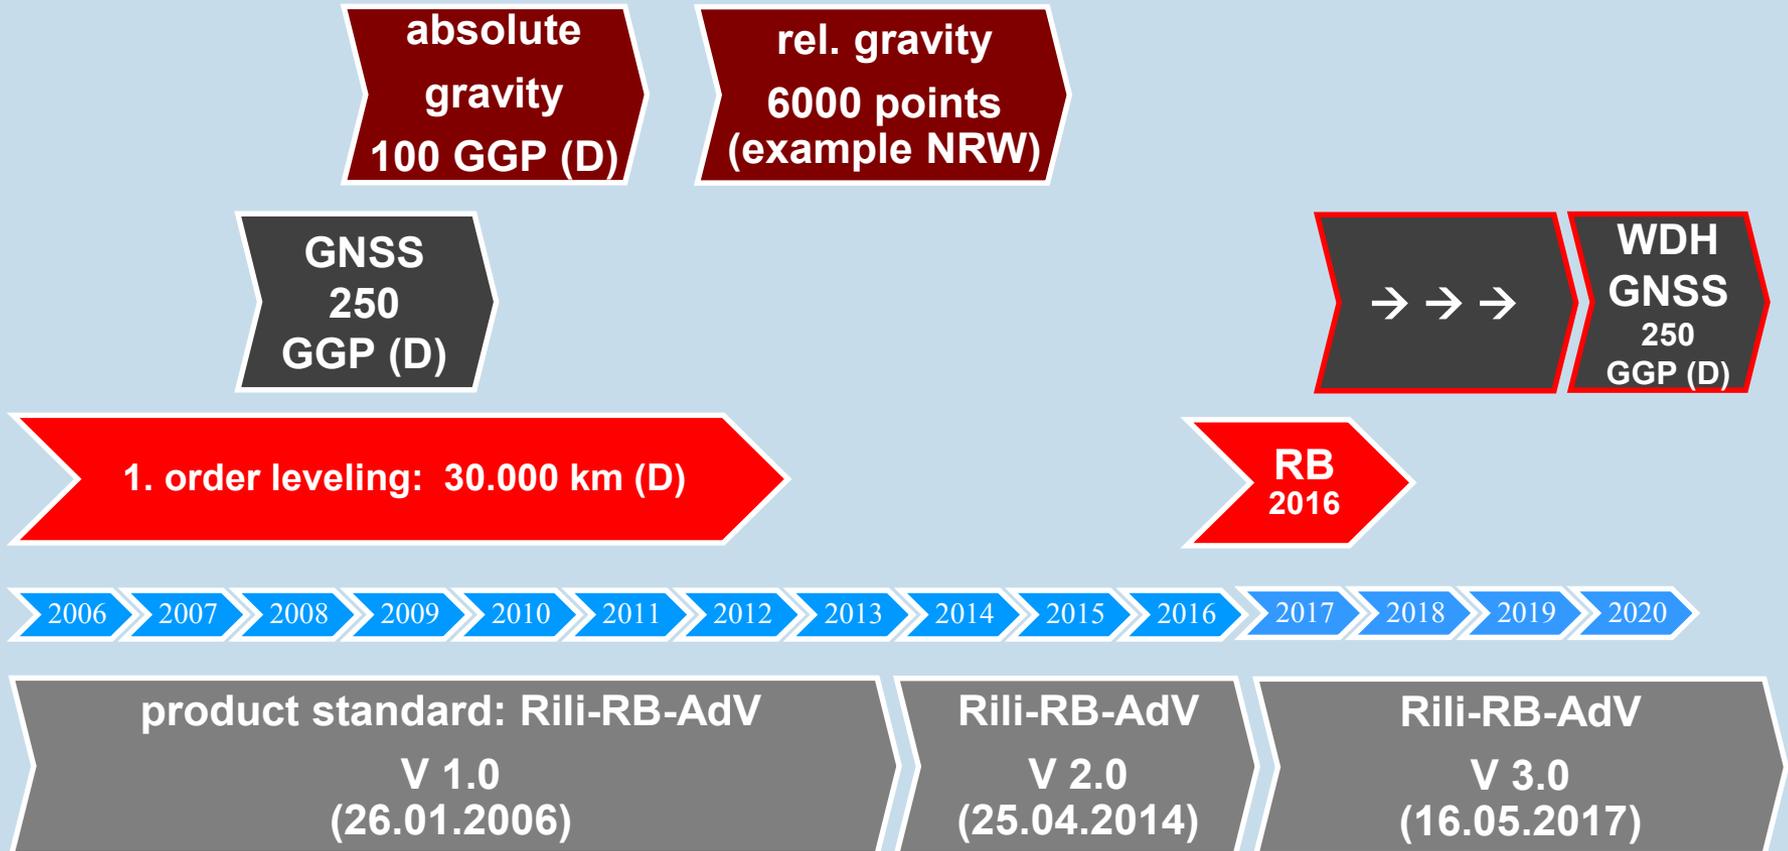

- **Time series show relative movements** (for example, long-term coordinate monitoring in GNSS networks (SAPOS) or in leveling networks)
- **Marked points** lose their original importance. As **geo-sensors**, they can provide a monitoring function.
- the **updating of 2D/3D** coordinates and heights will be a result of significant changes.
- The **scientific and social benefit** (e.g., climate change) can be exploited by evaluating (historical) measurements.
- Tendency: **Integrated Survey Concept** ("mix of methods")

# Integrated Geodetic Spatial Reference product view & quality management

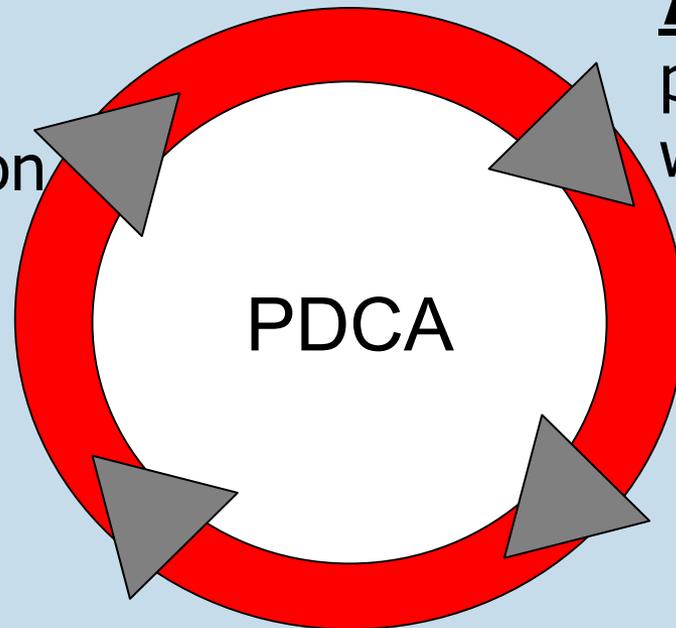

“The currently available **geodetic infrastructure** is ready for future applications, for example, for the centimeter-accurate vehicle navigation as a component of autonomous driving or for precision farming.”

## **Plan**

and provide  
product definition

## **Do**

provide the product  
with respect to definition

## **Act**

and improve  
product definition

## **Check**
