

National Report of ESTONIA

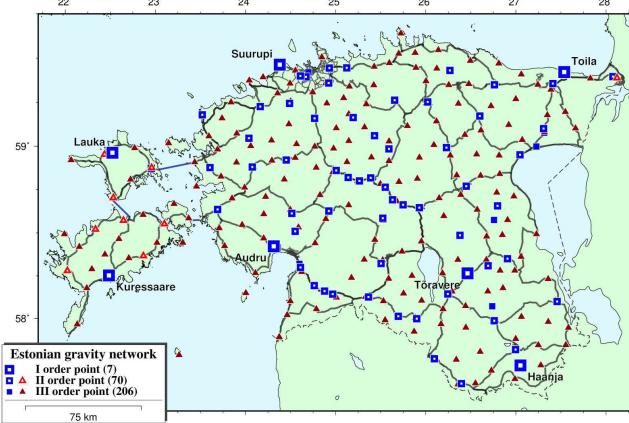

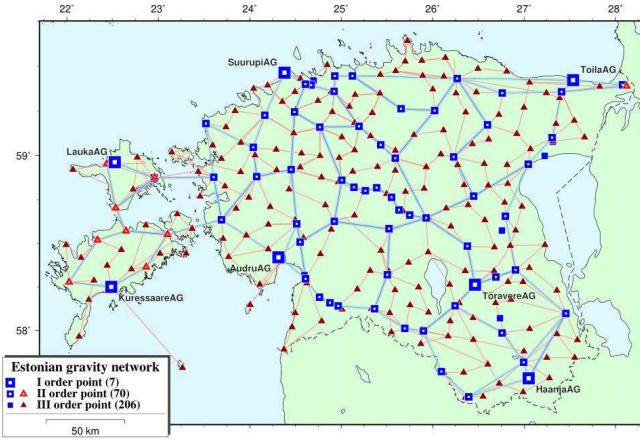

Karin Kollo, Jaanus Metsar, Priit Pihlak, Tõnis Oja, Artu Ellmann

Estonian Land Board

Multi-year solution for ESTPOS

- Included to EPN densification
- Active geodetic system monitoring
- Majority of stations have observations more than 3 years
- Time span 1408-2034
- Cumulative weekly solutions by ELB
- Final coordinates and velocities are given at the epoch 2013.00 (middle epoch of observations)
- Coordinates and velocities in IGS14
- Coordinates and velocities in ETRF89

Gravity frame EG2000

- Based on International IAGBN standards and absolute gravity measurements done in 1995-2017 in Estonia
- Gravity frame EG2000
 - I, II, III order networks
 - Integration with geodetic, height networks

Doi: 10.1093/gji/ggz054

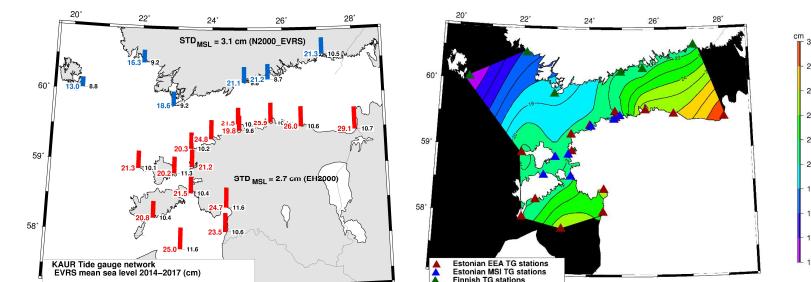

MAA-AMET

Connections to EH2000

- Connect local levelling networks to EH2000
- 2017-19
- 161 km – 248 benchmarks
- High-precision levelling to check the tide gauge connections
- MSL estimated at the Estonian coast
 - Methodology by Kollo & Ellmann

Geodetic Reconciliation of tide gauge network in Estonia. *Geophysica*, accepted.

Local geodetic networks & maintenance of geodetic marks

- City of Tartu 2017-2018
 - Reconstruction of local levelling network, incl. translation parameters BK77-EH2000
- Viimsi Municipality 2018-2019
 - Reconstruction of local geodetic network, incl. translation parameters BK77-EH2000

- Maintenance works of geodetic Network points (I and II order National Geodetic Network) ongoing

Estonian GNSS permanent station network (ESTPOS)

- 29 stations
- 9 stations from neighbouring countries
- 1 station from Maritime Administration network
- GPS+GLONASS+GALILEO
- 14 stations with meteosensors
- New site Mõisaküla at the Latvian border
