

National report of The Netherlands 2019

Dutch Partnership for Geodetic
Infrastructure (NSGI)

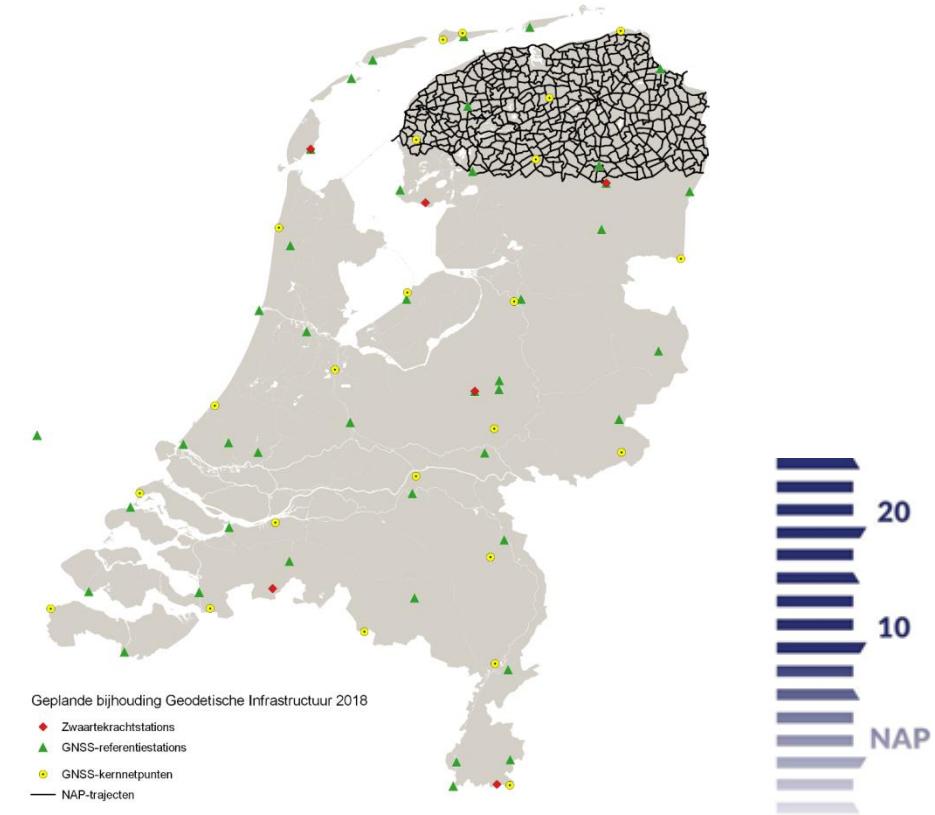

Royal Netherlands Navy

Network maintenance

- GNSS measurements at trig points
- Levelling of benchmarks
- ▲ Continuous GNSS stations
- ◆ Absolute gravimetry

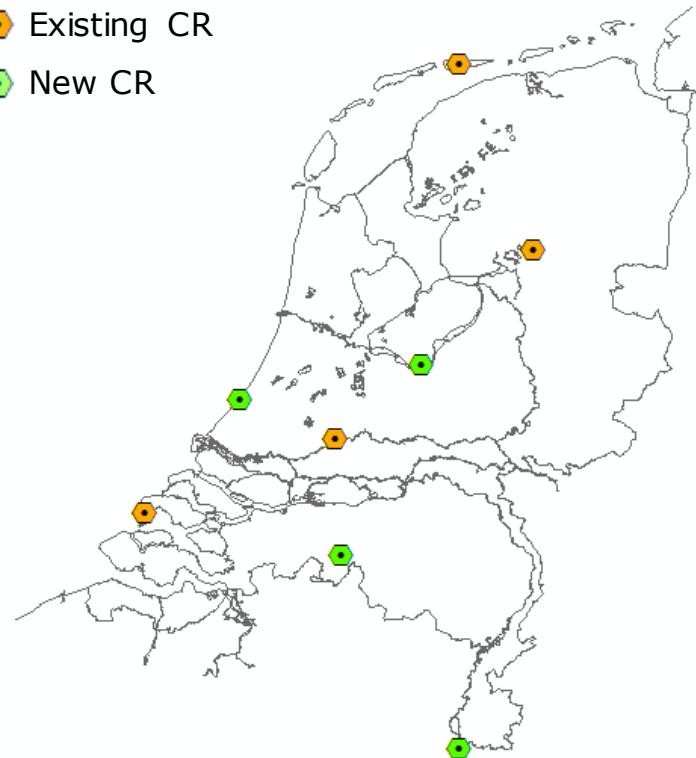

InSAR

- National deformation map
- Passive corner reflectors (CR)

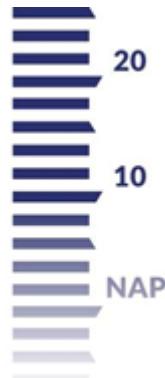

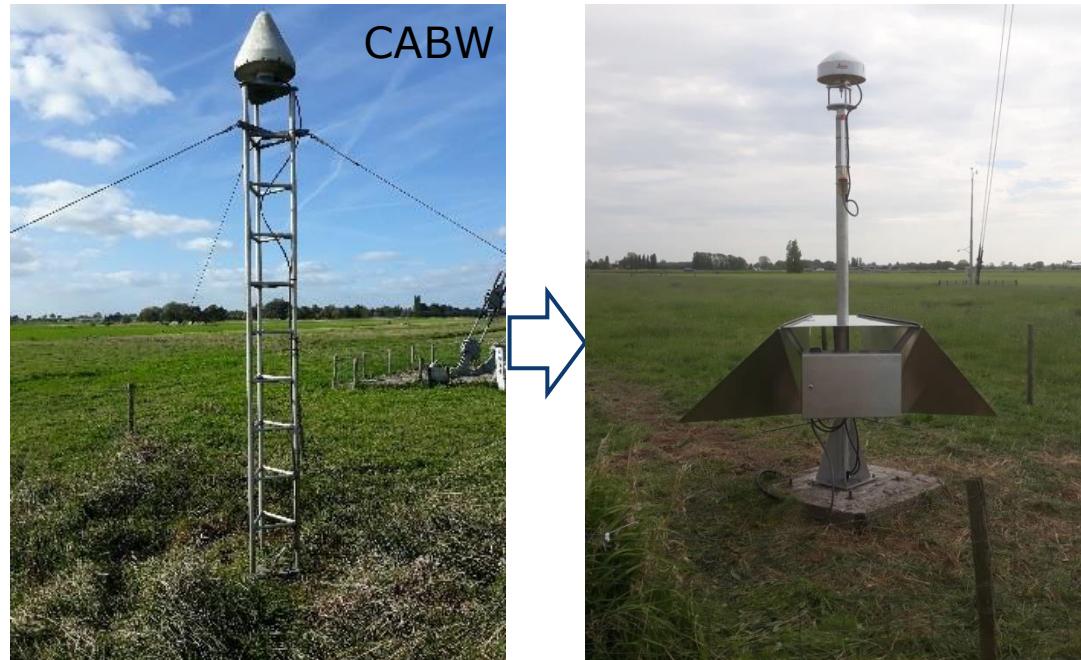

Existing CR
New CR

Integrated Geodetic Reference Station

- Colocate GNSS, InSAR, leveling, ...

InSAR infrastructure plans

New IGRS stations (destined for new locations)

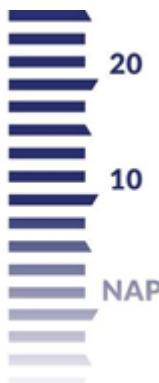

- IGRS installed in Cabauw (16 May 2019, by Kadaster)
- Further IGRS planned for Rouveen, Delfland, Epen for nation-wide InSAR infrastructure (with various partners)

ECR-C Transponders (destined for existing GNSS)

- Long running ECR-C phase stability test at Wassenaar test site
- EUREF stations IJMU and EIJS (replacement of SEA transponders)

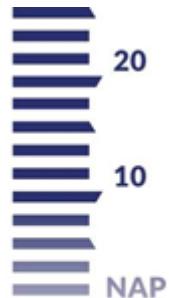

Group purchase of ECR-C transponders (contact h.vandermarel@tudelft.nl before June 5)

InSAR-Geodesy-Transponder (IGT) User group

GNSS infrastructure

- Caribbean Netherlands (SEUS, SABY)

GNSS infrastructure

- GNSS at wind farm site North Sea (BORS)
- Test site →

Antenna/radar mast

LiDAR system
KNMI

KNMI sensors

Wave height
sensor

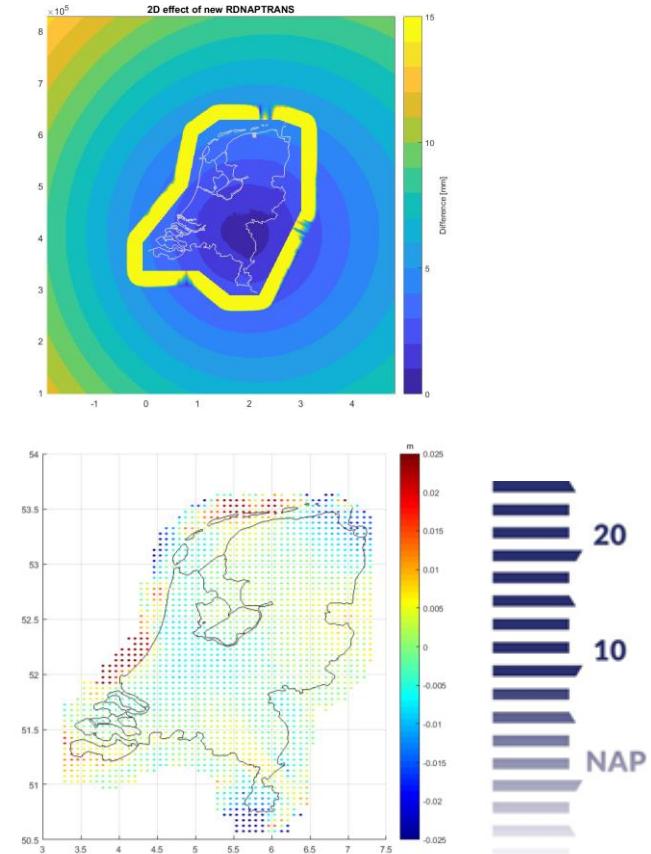

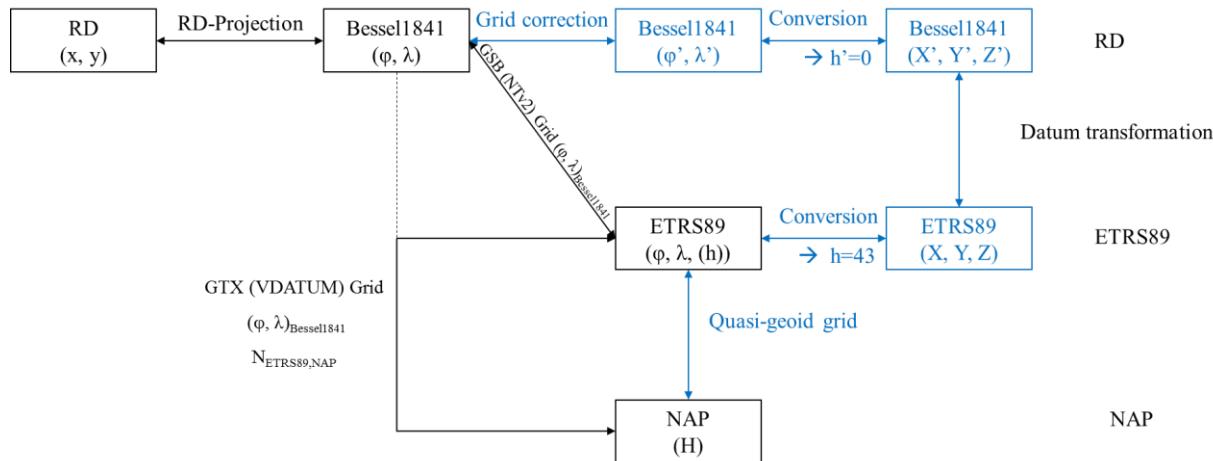

GNSS velocities

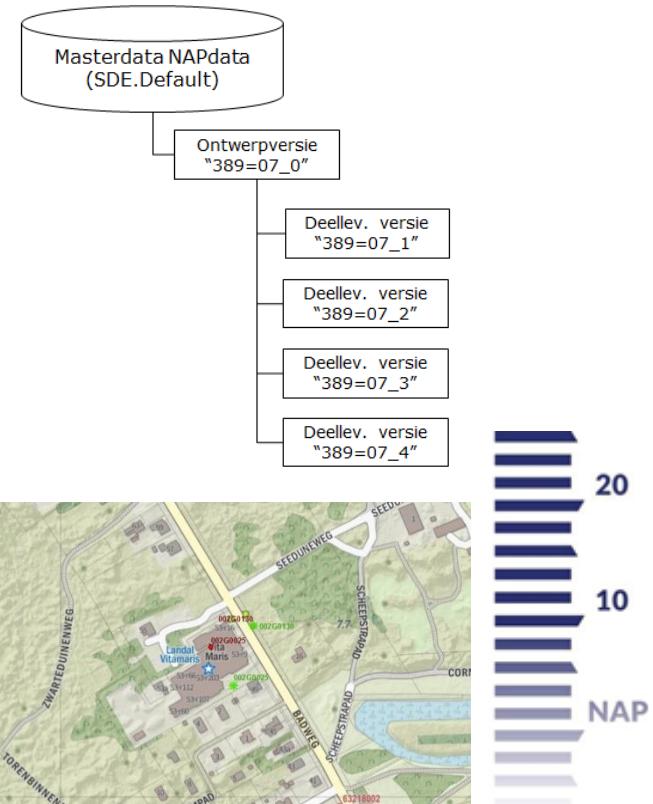

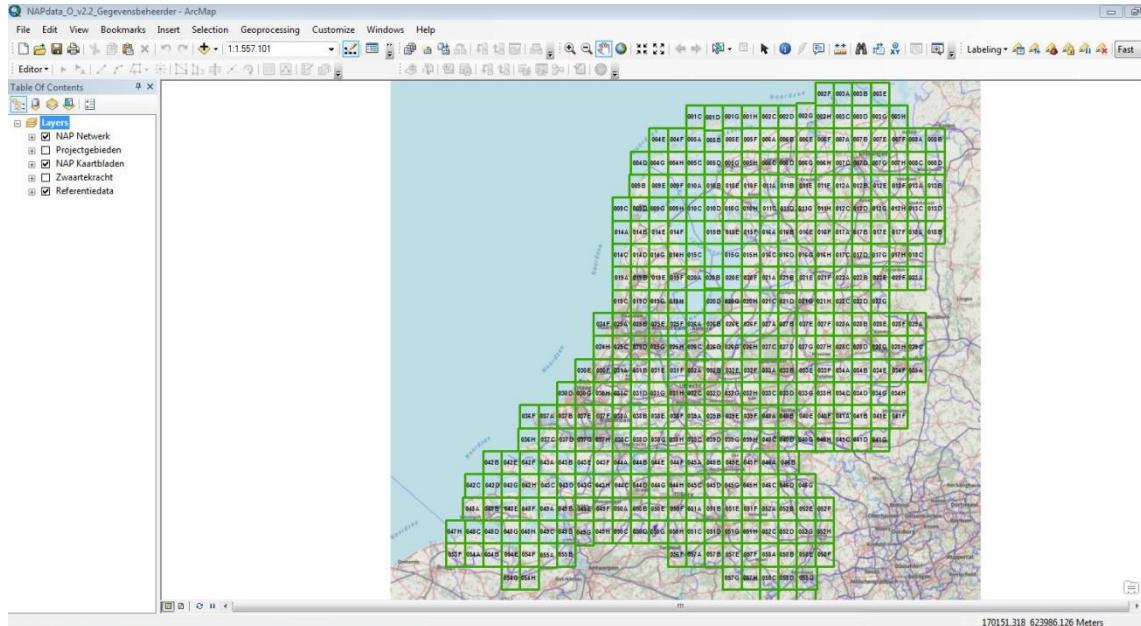

Transformation procedure

- RDNAPTRANS™ 2018

New NAP database

- Storage, analysis, network design and validation

Vacancy at Kadaster

Geodetic infrastructure and national triangulation network expert

adjustment

GNSS innovation
