Reference Frame Coordination Status Report

Juliette Legrand
Royal Observatory of Belgium

Content

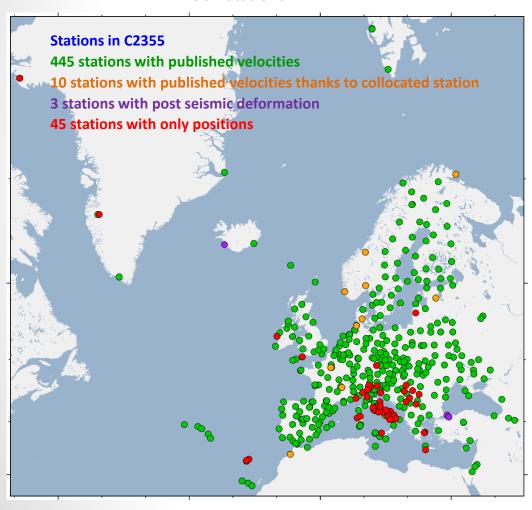

- Current Hybrid Solution C2355
- Publication of Reference Frame Product through EPOS Portal
- New Solution based on Repro 3

Hybrid Solution: C2355 (IGS20)

EPN Stations in C2355

504 Stations

No official EPN Reference Frame Product since November 2022: switch of EPN daily product to IGS20

Need to create Hybrid cumulative solution

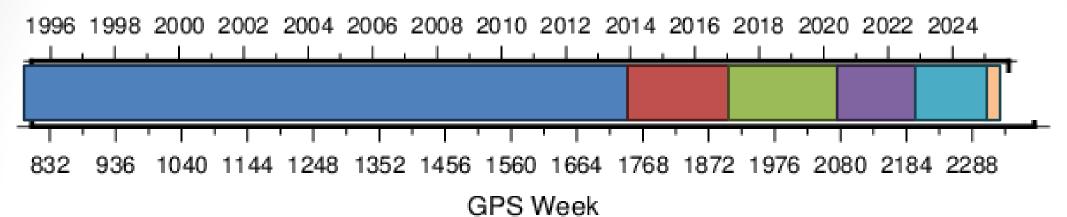

- 504 stations
- Period coverage: 1996-01-01 2025-03-02
- Based on various daily combined solutions
- Position and velocity discontinuities to fit IGS (IGb20) discontinuity list
 - EPN stations ∈ IGS cumulative solution:
 - Position and velocity discontinuities from IGS20 ftp://igs-rf.ign.fr/pub/discontinuities/soln.snx
 - Add necessary new discontinuities (EPN specific or recent)
 - EPN stations ∉ IGS cumulative solution:
 - Same position and velocity discontinuities as C2235 + recent discontinuities
- Aligned in origin, scale and orientation wrt IGS20 using 54 reference stations

Not suitable as Reference Frame to align official densification Provide up-to-date station coordinates and velocities for daily monitoring while waiting for the REPRO3 solution

Hybrid Solution C2355 aligned to IGS20

Year

Hybrid Solution: C2355 (IGS20)

EPN Stations in C2355

504 Stations

No EPN Reference Frame Product since November 2022: switch of EPN daily product to IGS20

Need to create Hybrid cumulative solution

- 504 stations
- Period coverage: 1996-01-01 2025-03-02
- Based on various daily combined solutions
- Position and velocity discontinuities to fit IGS (IGb20) discontinuity list
 - EPN stations ∈ IGS cumulative solution:
 - Position and velocity discontinuities from IGb20 ftp://igs-rf.ign.fr/pub/discontinuities/soln.snx
 - Add necessary new discontinuities (EPN specific or recent)
 - EPN stations ∉ IGS cumulative solution:
 - Same position and velocity discontinuities as C2235 + recent discontinuities
- Aligned in origin, scale and orientation wrt IGS20 using 54 reference stations

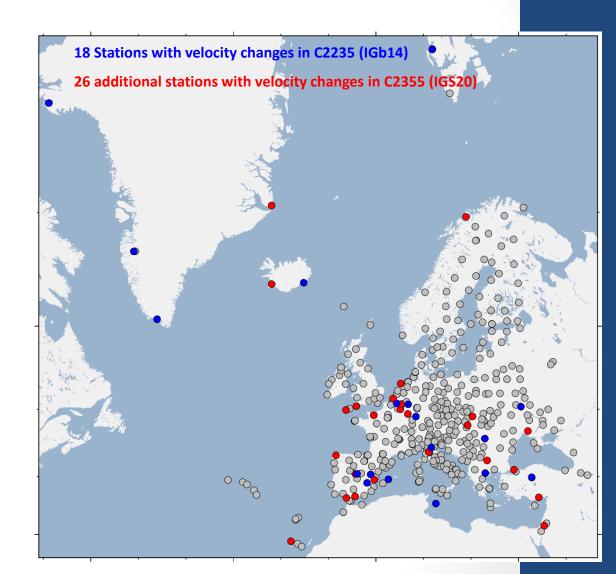

Not suitable as Reference Frame to align official densification Provide up-to-date station coordinates and velocities for daily monitoring while waiting for the REPRO3 solution

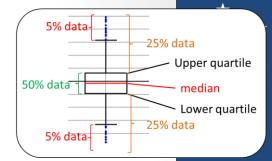

- Positions:
 - 1008 position discontinuities affecting 352 stations
- Velocities:
 - 74 velocity changes affecting 45 stations
 - 18 stations with velocity changes in C2235

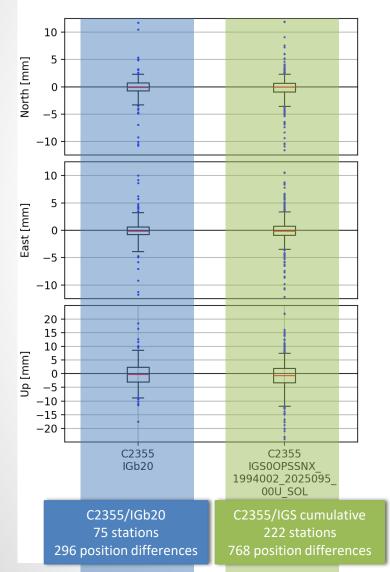

Comparison of C2355 wrt IGb20

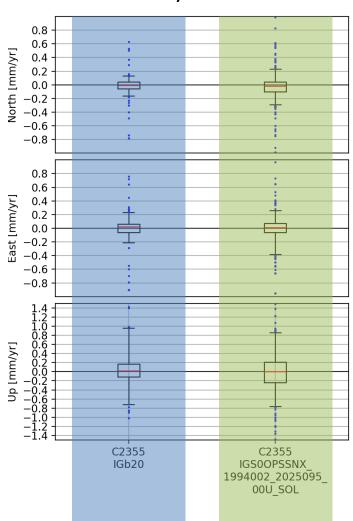

and IGS cumulative solution (IGSOOPSSNX_1994002_2025095_00U_SOL)

Velocity differences

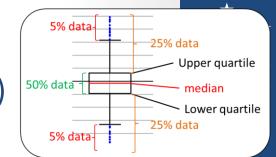

No systematic effect for positions or velocities!
Global alignment is reliable.

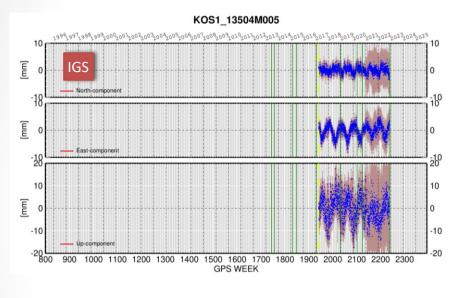

Agreement better than

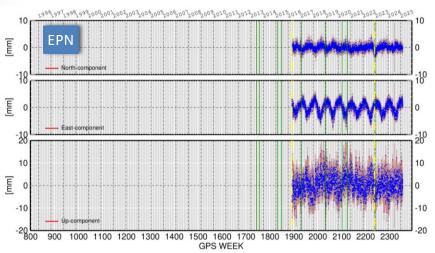

4mm on the horizontal and
10mm on the vertical for more
than 90% of the position
estimates

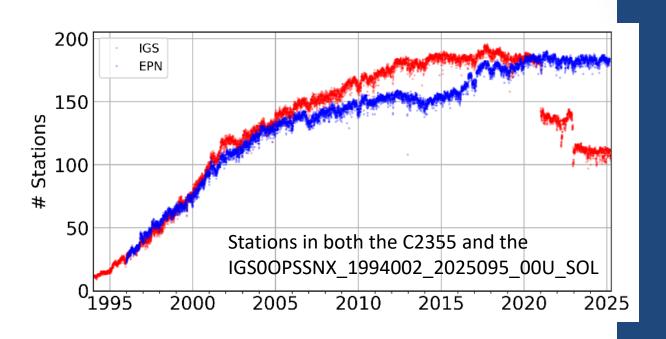

0.2mm/yr on the horizontal and 1mm/yr on the vertical for more than 90% of the position estimates

Comparison of C2355 wrt IGb20 and IGS cumulative solution (IGS00PSSNX_1994002_2025095_00U_SOL)

~40 stations stopped at the end of 2020 ~50 stations stopped at the end of 2022 In the IGS cumulative solution

https://epncb.oma.be/ productsservices/coordinates/hybrid.php

Positions & Velocities of EPN stations with more than 3 years

The positions and velocities of the EPN stations with more than 3 years of observations and without modelled post-seismic deformations are provided in the SNX and SSC format and are expressed in 4 different reference frames IGS20, ETRF2000, ETRF2014, ETRF2020.

| | SINEX Format | SSC Format |
|-------------------------------|---|---|
| ITRS (IGS20 realization) | EUR0EXPSNX_1996001_2025060_00U_SOL.SNX.Z | EUR0EXPSNX_1996001_2025060_00U_SOL_IGS20.SSC |
| ETRS89 (ETRF2000 realization) | EUR0EXPSNX_1996001_2025060_00U_SOL_ETRF2000.SNX.Z | EUR0EXPSNX_1996001_2025060_00U_SOL_ETRF2000.SSC |
| ETRS89 (ETRF2014 realization) | EUR0EXPSNX_1996001_2025060_00U_SOL_ETRF2014.SNX.Z | EUR0EXPSNX_1996001_2025060_00U_SOL_ETRF2014.SSC |
| ETRS89 (ETRF2020 realization) | EUR0EXPSNX_1996001_2025060_00U_SOL_ETRF2020.SNX.Z | EUR0EXPSNX_1996001_2025060_00U_SOL_ETRF2020.SSC |

Under test: For Bernese users, a CRD (EUR0EXPSNX_1996001_2025060_00U_SOL.CRD) and a VEL (EUR0EXPSNX_1996001_2025060_00U_SOL.VEL) file are available for all the stations observed within the last 270 days. For each station, the position and the velocity of the last available solution number is given.

- EUREF GNSS Daily Position Time Series from ROB-EUREF
 - Cleaned IGS20 Position Time Series of the EPN stations with published velocities
 - Reconstructed based on the reference frame solution C2355
 - Daily positions have been re-aligned to the solution C2355
- EUREF GNSS Velocities from ROB-EUREF
 - Estimated with Hector software (Bos et al., 2013)
 - Estimate a linear trend, an annual and semi-annual signals assuming a temporal correlated noise (power-law + white noise)
 - More realistic velocity error estimates

Velocity Product: Example of ALBA00ESP

EPOS GNSS Guidelines:

- Only one velocity per station
- PBO Format for velocities

```

```

- Velocity estimated using Hector (white noise + powerlaw + trend + annual and semi-annual signals)
- More realistic velocity error estimates

- Hybrid solution C2355 is offering up-to-date station coordinates and velocities for daily monitoring while waiting for the REPRO3 solution
- The solution C2355 is published:
 - at EPN CB at https://epncb.oma.be/pub/product/referenceframe/hybrid/C2355/
 - at EPOS GNSS product portal with a slightly different approach:
 - EUREF GNSS Daily Position Time Series from ROB-EUREF
 - EUREF GNSS Velocities from ROB-EUREF
 - One velocity per station
 - Velocity is estimated with Hector software (white noise + power law)
- Hopefully C2355 is the last hybrid solution that will be published

ROYAL
OBSERVATORY
OF BELGIUM

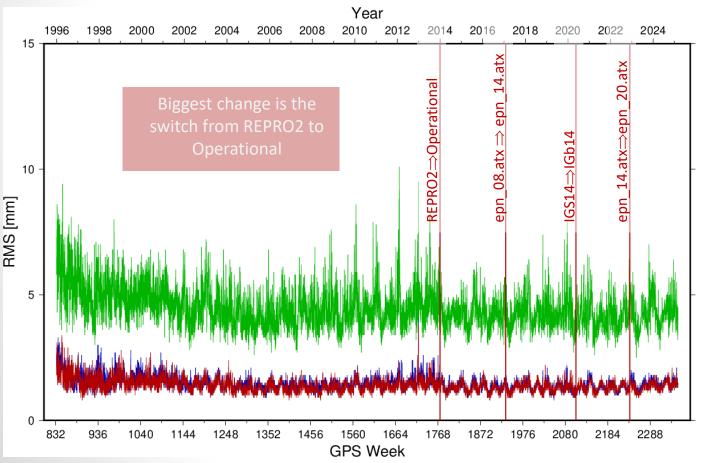

- Nothing new on my side: waiting for daily combined Repro 3 solutions
- Plan:
 - Summer: Preparation of the multi-year Reference Frame solution
 - Cleaning and modelization (outlier rejection, position and velocity discontinuities)
 - Harmonization with IGS cumulative solutions
 - Autumn: Publication of a Preliminary Reference Frame solution
 - SINEX, discontinuities and outlier list, no classification
 - Winter:
 - Classification
 - Iteration, Feedback from users, additional tests
 - Official Reference Frame product (SINEX, Classification...)

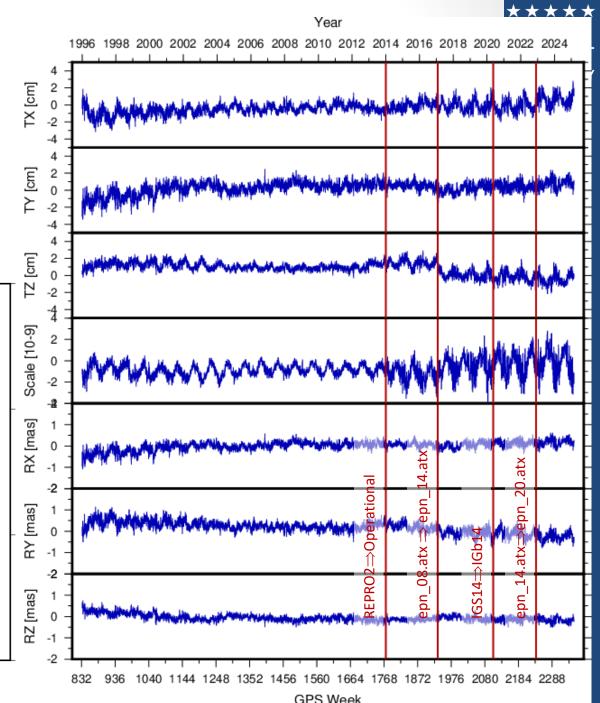

ROYAL OBSERVATORY OF BELGIUM

Internal consistency of the hybrid solution: Transformation Parameters

Comparison with IGb20: Position differences
